

EVSE Australia's Leading Smart Apartment EV Charging Station Provider

Why futureproofing EV Charging in Apartments is a consideration today

New South Wales, Oct 5, 2018 (IssueWire.com) - EVSE has partnered up with Australia's leading commercial and residential developers to incorporate futureproof EV charging solutions to ensure new and existing buildings are EV Ready.

Once almost exclusively the domain of Tesla, more and more car manufacturers are producing electric vehicles (also known as EVs), as countries such as Norway, China and Britain set goals to cease selling gasoline and diesel-powered vehicles in coming decades.

And Australia is starting to catch on, says Sam Korkees, co-founder of Evse.com.au, the country's leading seller of EV charging stations and accessories. "Every year it's increasing," he observes. "In

2017, there was a 57 per cent increase in EV sales from the previous year.”

“We know that the cost of retrofitting EV chargers, especially in apartments, is huge,” he notes. “It’s a great way to not only future-proof your development, but also add value to it.”

A project Korkees is currently working on is Urbancom’s luxury Lane Cove development, Infinity Cove. George Daoud, Urbancom’s managing director, says he and his team made the deliberate decision to equip every apartment in the project with a universal EV charger as standard – though buyers can opt out if they wish.

It will be Australia's first EV Ready Residential development, and first of many for this innovative company [EVSE](http://www.evse.com.au) Australia as they seek to roll out their market leading EV solutions across the country.
