- Major companies profiled along with competitive landscape analyzed on the basis of business strength & product offerings
- Cross-sectional analysis of each region covering individual segments for the forecast period 2016 – 2018 in terms of value (US\$Mn)

Research methodology devised for this study:

Our methodology comprises a blend of primary and secondary research for engineering the market size, shares and estimations for global E-commerce Software market specific to key segments, and regional segmentation.

- Secondary Research

Some of the basic, but most important sources referred during the study included company annual reports, press releases, and relevant documents throwing light upon the recent developments in the global E-commerce Software market. Reliable sources such as scientific journals, university research papers and government websites were equally referred for recognizing business opportunities in various geographical markets and market penetration of various products/services. In addition, paid databases were referred to collect information useful for the extensive commercial study of the key players operating in the E-commerce Software market. In the case where no data was available on the public domain, we used modelling and estimates to arrive at comprehensive datasets. Secondary research helped to prepare a base for E-commerce Software market study.

- Primary Research

The extensive secondary research carried out was complemented by extensive primary research to validate data and analysis. Primary research involved telephonic interviews, e-mail interactions as well as face-to-face interviews with the leading industry experts.

The participants tracked for primary interviews include:

- Vice President/ CEOs
- Marketing/product managers
- Market intelligence managers
- National sales managers
- Purchasing managers
- Distributors
- Other stakeholders
