

Solutions To Inspire Launches World's First Multi-Adaptable Aluminium Wireless Charger

The only 4 in 1 Apple charging device on the market released onto Kickstarter

South Australia, Feb 12, 2019 (Issuewire.com) - Gone are the days of turning the house upside down to find the correct charger that fits into your Apple watch or iPhone.

STI has found the solution to not just having one portal for all your electronics, but one which is able to charge them all simultaneously and wirelessly. The iComboStand charges your iPhone, Apple watch

and AirPods, whilst including a bonus USB for a fourth device.

What sets this product apart from others?

The iComboStand is not made from plastic but Aluminium, making the device more environmentally friendly as well as visually appealing for your bedside table or office desk.

The other compelling feature is that it is an upright stand, allowing users to position the device to the angle they so desire.

Solutions To Inspire iComboStand product innovator Daniel Sibly said most wireless charging stations only allow you to lay your device down.

“The iComboStand allows you to use the iPhone both landscape and vertical whilst charging your phone at the same time,” he said.

“Our product is unlike any other because it has been made to fit with the specific lifestyle of the user, you can comfortably watch Netflix, YouTube and even FaceTime whilst your device charges”.

“Also one of the real benefits of the iComboStand is the capability to convert your iPhone into the perfect bedside alarm clock”.

“It’s frustrating how the current chargers for Apple devices restrict how you can use devices when charging them,” he said.

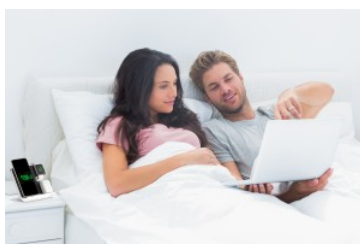

All three devices are Qi, differentiating from the current Apple watch and AirPods stands which still use the old cord system. The iComboStand AirPods charging case allows users to connect to wireless charging compatibility for the first time.

The product has also been made to suit the travel needs of users in its compact and light adaptability and charging speed.

“It uses a fast charge of 10watts for the iPhone and 5 watts for the Apple watch and AirPods,” Mr. Sibly said.

28% of funding has already been pledged, with 29 days to go for customer pledges to be made and the [Kickstarter](#) target of \$20,000 to be reached.
