

HYC Announces LC Uniboot Push-Pull Tab Connector

LC Uniboot Connector

High density solutions

Shenzhen, Mar 18, 2019 (Issuewire.com) - HYC releases a new LC uniboot connectors for high-density environment. With the increasing demand for data centre and bandwidth, effective cable management is a real issue. How to build more optical fibre cables in limited space is becoming a challenge for data centre managers.

For data centre managers, convenient management and space saving are really important in high-density cabling. LC Uniboot connector is specially designed and manufactured for better airflow and cable management in high-density applications. What are the benefits of LC Uniboot connector?

Compact design to save space

Combining two fibres into a single jacket can save up to half the patching cable space compared to traditional LC duplex fibre patch cords.

Push-pull tab design

For data centre administrators, it can be challenged to insert and disconnect patch cords, especially in a high-density environment. The push-pull tab design of LC Uniboot connector makes for easy removal of the assembly without disturbing the neighbouring ports, which offers maximum accessibility in high-density installations. With this design, the technician is able to finish the installing and removing procedures with only one hand and no additional tool is needed. What's more, half-surround tab end avoids the cable ganged each other.

Easy Polarity Revisable

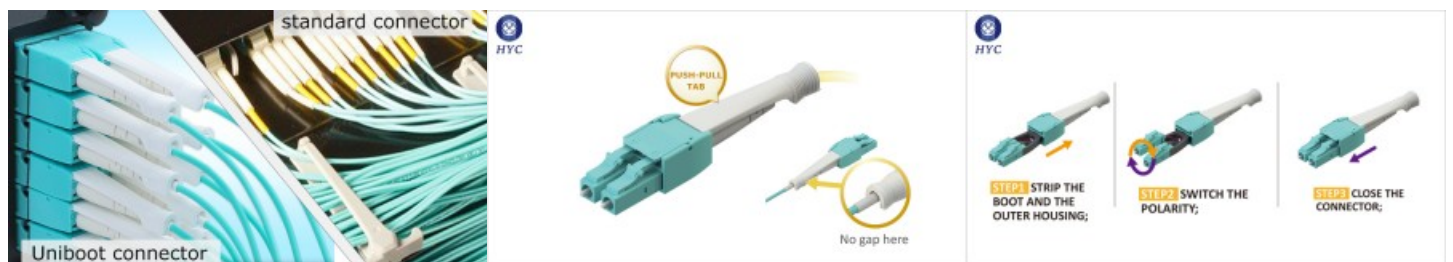

The traditional LC connector uses two jumper independent connections. If you want to change the polarity of the transmission and reception, you need to change the entire wiring system. It is difficult to

do that and prone to failure. The uniboot option includes a reversing polarity feature that provides quick and easy polarity changes in the field. Polarity changes can be made in the field quickly, without the use of tools, to the correct fibre mapping polarity.

The compact design and easy polarity reversible function of the LC Uniboot Connector makes managing cable systems simpler.

[HYC Co., Ltd](#) HYC is a Hi-tech optoelectronics company from China, who engaged in R&D, manufacture and marketing of fibre optical products. Providing professional product and service for fibre connectivity, WDM, PLC splitter and high-density datacom cabling. HYC products and solutions widely applied in 4G/5G, Data Center and Cloud Computing industry etc.
