

Android Ireland Launch the First Android 9.0 Android TV Box in Ireland.

Dublin, Apr 23, 2019 (Issuewire.com) - Ireland's leading supplier of the Android TV box has become the first company in Ireland to launch the new range of android 9.0 TV boxes. Android 9.0 known as "Pie" is the newest version of the Android operating system and it can only be a good thing for all the android TV box lovers as it has many new features to the most recent update that was android 8.1.

One of the major changes that are useful for users of the Android TV box is an easier text selector. Traditionally using the standard remote control with the Android TV box can be quite frustrating but with the Android 9.0 text selector, it is now easier to input your desired text with the limited remote controls that come with these boxes. Another addition to Android Pie is the "dark mode" which means that if you are watching a video using the browser that the Android TV box will automatically darken the rest of the content in the browser making it much easier to see the video.

"The addition of the Android 9.0 Android TV box range is a welcome addition to our already extensive range of TV boxes." - Noted Etech's CEO

About Android Ireland:

Android Ireland is Ireland's oldest and most popular Android TV box supplier. Importing goods directly from China they have the best prices available to complement their free and fast shipping service. To go along with this they also offer a 12-month warranty on their android TV box range showing how confident they are of their quality products.
