

Cape Town's Fireplace Manufacturing Experts

Western Cape, Apr 17, 2019 ([IssueWire.com](http://www.IssueWire.com)) - As a fireplace manufacturer, Lancel Engineering has always believed in continuous innovation. The company strives to deliver unique solutions to its customers something unique and functional at the same time. Established in 1989, the company has earned a name as a specialist in the manufacturing of custom fireplaces. The fireplace experts of Cape Town are also known for their unique range of braais and hand-built fireplaces.

Products Offered by Lancel Engineering:

[Lancel Engineering](http://www.LancelEngineering.com) manufactures and supplies braai units and fireplaces of several different kinds. These include:

1. Braais – Lancel Engineering offers braais in four different forms – built in, free-standing, basic and super deluxe. A basic braai unit produced by the company includes a basic unit, a door, gather, tray and a stainless steel grid featuring filters. Their braais are manufactured to guarantee strength, prevent buckling and offer internal height-adjustability. The individual sections of the braai can be easily removed for cleaning and refurbishing purposes.

2. Built-in Fireplaces – The enclosed built-in fireplaces are subtle and feature a decorative edging on three sides of the unit. Lancal Engineering offers a great selection of built-in fireplaces including hexagonal units, universal units, oblique or conical units, and onyx units. All units include a grate, pan, flues and a cowl. They are available in various configurations like standard, double-sided etc.

3. Free Standing Fireplaces – A freestanding unit is mounted on a pedestal that can be used as a wood storage bin too. The unit doesn't have any edging on it, as it is free standing and can also be moved easily. Lancal engineering manufactures free-standing units in mild steel, 316 stainless steel and a mixture of mild and stainless steel. Like the built-in fireplaces, the free-standing ones are available in configurations like corner and flat back onyx, cylindrical, hexagonal, conical, roundhouse and oblique.

4. Custom Fireplaces – Lancal Engineering offers custom manufacturing of units in sizes different than the standard size. They offer customizations for all their braai's and fireplaces. You can even opt for a combined braai and gas grill unit.

Apart from fireplace and braai units, Lancal Engineering also furberishes construction companies with their steelwork requirements. They offer boundary fences, pedestrian gates, structural posts, balustrades, and heavy I-beam work too. For more information on their products, please visit their official website: <https://lancalengineering.co.za/>.

About the Company:

Lancal Engineering based in Cape Town is a family owned and operated business. Operating for about 30 years, the company has established its name as a renowned manufacturer of custom fireplaces, braai units, bases, and cowl. The company caters not only to fireplaces but all types of steelwork.
