Increasing Food and Drug Administration (FDA) approvals of biosimilars and developing pipeline of new drug for treatment of stomach cancer are expected to drive the stomach cancer drugs market size. For instance, in January 2019, the U.S. FDA approved South Korea's Samsung Bioepis' Ontruzant (trastuzumab biosimilar) for the treatment of metastatic gastric cancer or gastroesophageal junction adenocarcinoma. Samsung Bioepis is a joint venture between Samsung Biologics and Biogen. The biosimilar was approved by the European Commission (EC) in November 2017.

Many companies such as Pfizer Inc., Merck & Co., Bristol-Meyer Squibb, and Eli Lilly & Company are focused on drugs which are in the pipeline such as Ipilimumab and Nivolumab and are expected to launch in near future. For instance, in 2018, Bristol-Meyer Squibb's Opdivo (Nivolumab) intravenous infusion injection is in the development pipeline. It is in phase 3 for treatment of stomach cancer and is expected to launch in the U.S., Europe, and South Korea.

Emerging research, developmental studies, and clinical trials to understand stomach cancer better and to develop medicine are highly contributing to the stomach cancer drugs market revenue. One of the most recent updates of clinical trials for stomach cancer in March 2019, is the research on *Helicobacter pylori* eradication for gastric cancer prevention in the general population. This research is being sponsored by National Cancer Center, Korea and has entered into phase 3 showing positive results using bismuth-based quadruple therapy. Furthermore, in December 2018, Korean South West Oncology Group started a clinical trial on efficacy and safety of combination therapy with ramucirumab, paclitaxel, and trastuzumab biosimilar as a second line treatment of HER2 positive metastatic gastric cancer after failure of first-line chemotherapy including trastuzumab. This study is in phase 2 and is expected to complete in 2022.

Moreover, various companies in the stomach cancer drugs market are focused on making strategic partnerships and collaborations in order to gain significant market share. For instance, in October 2016, Teva Pharmaceuticals partnered with Celltrion Healthcare Co. Ltd to commercialize biosimilar versions of Roche's Herceptin to strengthen their product portfolio and fill a gap in its biosimilars pipeline.

Key Takeaways of the Stomach Cancer Drugs Market:

The global stomach cancer drugs market is expected to expand at a CAGR of 5.4% during the forecast period (2018–2026), owing to increasing research & development activities, and demand for genomic and repertoire sequencing-based research.

Among therapy type, the Car T cells segment are expected to earn maximum growth opportunity. For instance, in 2017, pembrolizumab (Keytruda) the immunotherapy agent was approved by the U.S. Food

and Drug Administration (FDA) to treat stomach cancer in some patients whose previous treatment did not work or stopped working, and it proved to be better than chemotherapy.
