

Cutting Edge Power Inc. Announces A New Mini Wind Turbine

Houston, Jun 17, 2019 (Issuewire.com) - Cutting Edge Power Inc. is excited to announce the launch of their revolutionary **new Twister Mini Wind Turbine**, the latest in their popular line of mini wind turbines.

The Twister Mini Wind Turbine is designed to be ultra-portable and can collapse down to fit in the back seat of a car. When deployed, the turbine can be easily raised up to 12 feet tall in a matter of minutes. A simple and quick to assemble wind generator is extremely useful in all kinds of applications – from camping, to tailgating, to natural disaster relief. It's available with a 12V DC output or USB output to charge any phone, tablet, etc.

“Our mini wind turbines have always been one of our most popular products. Now, we’ve taken an extra step forward by providing a simple kit that’s exactly what our customers need.” a spokesperson for Cutting Edge Power stated. “The new Twister mini wind turbine is super simple to set up – All you need is a screwdriver and a hammer and about 5 minutes.”

Here’s how it works:

The new Twister is able to thread onto any standard construction extension pole (like a paint roller extension, etc). You can order it included in the kit from Cutting Edge Power, or you can use your own. If you order the kit, it also includes a guy wire ring as well as guy wires and stakes to stabilize the pole. The video explains it all: https://www.youtube.com/watch?v=xw8_21nfVe8

Being able to raise the turbine higher up allows Cutting Edge Power customers to get the maximum power out of their mini wind turbine. Traditionally turbines like this are mounted on a tripod, but 12ft tall tripods are rare and expensive. This helps keep costs down and provides a simple and elegant design that looks cool too. Your tech friends will definitely be impressed.

About Cutting Edge Power Inc.: Cutting Edge Power is one of the many companies that has decided to expand their portfolio with IoT (Internet of Things) products this year. With headquarters and manufacturing locations in Dallas and Houston, TX they have been providing wind turbines and accessories, solar panel accessories and electrical controls and monitoring since 2014. The company has rapidly become an influential player in the residential and commercial wind and solar industry. You can find their products on their website at CuttingEdgePower.com as well as Amazon.
