

Perfectly Portable Teeth Cleaning Solution

Oral Care on the Go

RipPak Tooth Powder

RIPPAK

RipPak is there for you on any adventure. No toothbrush? No toothpaste? No water? No worries! Stop hiding the problem with temporary breath savers, and put RipPak in your pocket instead.

BUY RIPPAK NOW!

RipPak is for the everyday person. RipPak was brought to life for moments when time is tight as a result. The most kind of the same and makes our teeth while outdoors, on our adventures, or travel. It's a very required water for its use which isn't always available. RipPak, water is not necessary. The package you receive is an ordinary product. In fact, the way you use it is what sets it apart.

DIRECTIONS: Rip, Pour, Clean, Go.
RipPAK, Pour 2/3rds Mouth, Swish for ~30 Seconds, Spit, Adventure Responsibly!

INGREDIENTS: Xylitol, Sorbitol, Citric Acid, Calcium Hydroxide, Stevia Leaf Extract, & Natural Flavors.

Eustis, Sep 12, 2019 (Issuewire.com) - **Small Pak. Large Impact.**

Oral Care on the Go.

RipPak provides a convenient way to take care of your dental hygiene no matter where you are at. A single serving tooth powder that goes wherever you may go. A perfectly portable on-the-go dental hygiene solution. RipPak is not a mint or breath-saver like every other product out there. This is something that will actually clean the residue off your teeth and not leave anything behind. The single-serving tooth powder can be used, not only in humanitarian aid worldwide, but for everyday use by people outdoors and the military.

[What is RipPak](#)

In 2010, RipPak founder Donald Williams was recalled, along with his Marine Corps unit with the 22nd MEU, from their post deployment leave to aid in the Haiti Earthquake Relief Effort. The thousands of Meals-Ready-To-Eat (M.R.E.'s) being delivered did not include anything for oral/dental health. Water bottles are inefficient and produce waste, and toothbrushes can quickly become unsanitary in harsh environments. Often the Haitians had to trade the M.R.E.'s at the local food markets for softer foods, sacrificing the nutrition from the full meals. The long-term effect of this was people dying because of a lack of nutrition and oral infections that could have been prevented with simple teeth brushing or mouth washing. In short, the meals were offering nutrients to the population, but fueling the fire of dental hygiene problems. This discrepancy exists not only in Haiti, but in nearly every natural disaster site, war torn country, and developing communities around the world.

[Real People Try RipPak](#)

"This product is so amazing, perfect for people on the go! This is my go to product as a United

States Marine because simply put other products can't handle the rigors that we go through! If this product can keep up with us as Marines it will definitely be able to keep up with the challenges your lifestyle throws its way as well!" - Forrest Minx

"The packaging is really unique and easy to throw in a pocket before heading out to lunch or on a trip. The first time you use RipPak, it is actually kind of fun as the foam happens and it just starts to dissolve as you swish to brush. Never would have thought something so small and functional could provide the clean and refreshment needed. I go to Haiti every year and cannot wait to try it there and share with my friends there." - Kyle M

"I keep these in my camping supplies in my car for my spur of the moment wandering. Makes no mess since they're single serving and don't have to worry about toothpaste getting everywhere. A week's worth of fresh breath in a small pouch on my daypack." - Spencer.
