

# Vision Professional Realseed on windows 10 store

26th September couldnt of come sooner with the rease of new CRM/ Issue Tracking and Finace App Vision Professional

**West Midlands, Sep 30, 2019 (Issuewire.com)** - The 26th of September 2019 could not of come sooner for small UK business Vision Business Management LTD, As their new product Vision Professional takes the windows 10 store by storm, Started by Reece Smith-Ward, 21 from Birmingham, the United Kingdom at the age of 18, Vision Professional started its life as a Customer Relationship Management App running on the Windows 10 store, but that customer relationship app has now grown and brought some great features along with it including new and improved Customer Relationship Management system, Issue Tracking and Finance. This has come from the help of over 40 UK small businesses that help build Vision Professional.

Visions app store page says the following:  
<https://www.microsoft.com/store/productId/9PMJMC61LB14> Vision Professional is a universal application for a sizeable amount of small business, build by over 40 small UK businesses. Vision Professional has 3 integrated elements. Customer relationship management, Issue and customer tracking and finance management. Vision Professional is available in 242 counties and soon to be in over 100 different languages. Vision Professional is for small business and because of this all data is stored locally on your machine and never shared or seen by us, but rest easy because you can backup data whenever you like.

## Customer relationship management

Customer relationship management is essential for small business, every customer counts. Vision Professional keeps track of a large range of components that include:

- Companies
- Contacts
- Marketing Campaigns
- Leads
- Sales
- Quote
- Invoice
- Receipts
- Purchase History
- Production
- Delivery

All this data is stored and presented seamlessly in an easy to use application. All the data you enter generates semantic and easy to read reports that help you improve and grow.

### Issue and customer tracking

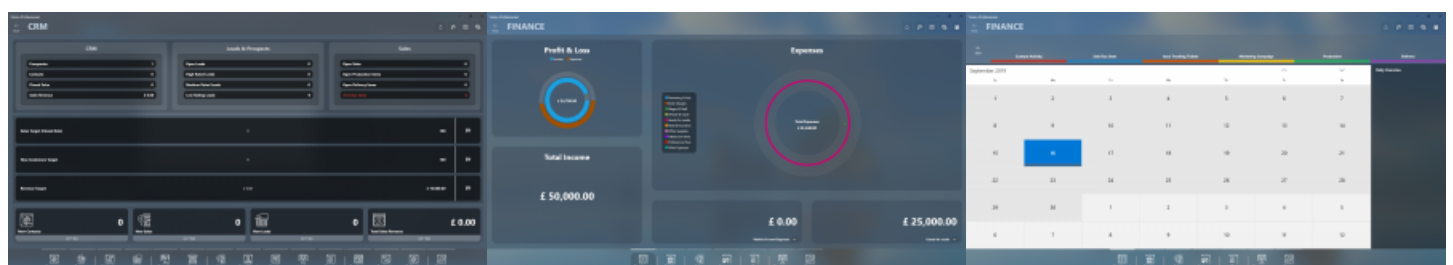

Issue and customer tracking is a great way to manage all issues that may arise with customers and clients. Issue tickets can be opened from sales, production, and deliveries to help manage issues in these sectors. You can also open and manage a ticket from inside the issue tracking part of the application, update the status and even create a contact and activity log for the issue.

### Finance management

Finance management is a great way to manage your business expenses, although not an accounting tool its great for keeping track. Vision Professional does not calculate TAX as we cover so many jurisdictions but log expenses and report on profit/loss. This has been built with the assistance of accountants in the UK and is great for management of business finance alongside an accountant and everything can be exported and given to an accountant who can calculate your tax from this report.

Talking to the Director of development Reece Smith-Ward he said that "Vision Professional has been created by me and team of 2 with some great support off over 40 small businesses all from the UK. We have built this app with small business in mind and made two big decisions because of this, number one being no monthly fees, It will always just be a one-off payment for everything. Secondly, keep all the data local to the user's computer, the cloud is great but there is no better way of knowing where your client's data is then when you have got control, The app does back up the data every time it is opened and you can also choose when you want to backup your data to an external source."

Vision Professional can be found on the Windows 10 store.  
Just search for Vision Professional
