

# Commercial boiler innovation in the UK

Natural Gas and Hydrogen Boiler Installers

**London, Oct 4, 2019 ([IssueWire.com](http://www.IssueWire.com))** - We install natural gas boilers and hydrogen boilers.

At UK Gas Plumbers we are pushing the innovation and designs of new commercial boiler systems to new heights and expectations. Our company Director has been named the Albert Einstein of commercial building services installation and maintenance. Our company is currently pushing advances in heating technology and newly invented systems into commercial properties and industrial premises.

Heat and water + Electricity and Solar to create and store hydrogen. This stored hydrogen is then safely used for the running of a commercial boiler and produces both heat and water in the form of steam. ... Electricity from solar panels on the roof is used to produce and store hydrogen. This hydrogen can then be used to fuel commercial boiler installation.

We provide in house full consultation service from the design stage to the finished article on commercial projects in London, all over the UK and parts of the EU.

Commercial boiler installation service with

- In-depth remote monitoring, operational checks, and components fault-finding inside of boilers and exterior plant room components via WiFi or Ethernet
- Boiler room rotating wireless CCTV installations for 24 hours visual inspection
- Advance weather sensors for the outdoor temperature and intelligent learning room thermostat.
- Building occupants Body temperature monitoring sensor and Zen humidity settings.
- We create a perfect co-habitat and working environment for businesses.
- We install new high performance condensing boilers

Our current Innovative project is the design and manufacturing of new commercial gas boilers with a reduction of nitrogen oxide emissions. And effective control the operational sequence of the combustion stages.
