

“Scaling with Systems” Entrepreneurial Program Teaches a “Delegation” and “Automation” Business Strategy

New York City, Nov 4, 2019 (Issuewire.com) - A good businessperson knows how to delegate authority to subordinates in their organization. One entrepreneur named Ravi Abuvala took this concept and developed an automated approach to it by using the power of technology and virtual assistants.

His program, “Scaling with Systems,” teaches a unique business strategy that relies on two key factors:

“Delegation” and “Automation.” Ravi has already helped grow hundreds of companies by teaching his delegation and automation strategies to entrepreneurs throughout the world.

In a normal business environment, delegation is the practice of entrusting other employees or specialists with certain tasks that benefit the organization. These could be menial tasks like answering phones, responding to emails, managing advertising campaigns, and so on.

For a business owner, they don't have time to waste on such petty tasks. That is why so many business owners fail because they aren't using their time wisely. They get too caught up in repetitive tasks while not focusing on the bigger tasks that will grow their company.

Ravi realized this problem when he tried starting his own businesses and lacked the time to do so. Even after he dropped out of law school to make more time for himself, Ravi still found himself working all hours of the day while trying to run his business. Then he realized that internet technology was a link to thousands of virtual assistants across the world who are highly skilled in a variety of different disciplines, such as marketing, social media, graphic design, customer service, and so on.

Rather than hire a local assistant for \$10 or \$15 per hour, Ravi trains the virtual assistants which you only have to pay a fraction of that price for even more efficient work. These are people who live in countries where the value of a dollar is considerably higher. In addition, hiring virtual assistants as contract workers mean that benefits don't need to be offered to them. There is less liability for an entrepreneur when they hire a virtual assistant via contract.

This is the power of delegation. Ravi's “Scaling the Systems” program equips his students to be able to find the best virtual assistants possible which will help scale their business. He wants his followers to learn how to make more money and spend less time doing it. This concept used to be a mere dream for a lot of entrepreneurs, but Ravi is now making it a reality for them. He has done it in his own business pursuits, and now he is showing others how to do the same through his “Scaling the Systems” program.

The neat thing is that delegation doesn't only involve virtual assistants. It also involves automation and technology-based resources, such as bots, artificial intelligence, and other forms of automated software. Once an entrepreneur can set up their automated systems and assign tasks to their highly skilled virtual assistants, then their entire business will run itself. They can spend less time working and make more money while computers and virtual assistants do all the repetitive work for them.
