

## Combining garage Door Aesthetics With Side Sliding Façade Doors

Rundum Meir's side sliding façade doors offer a wealth of design options for commercial and residential buildings.

**Liverpool, Jan 16, 2020 ([IssueWire.com](https://www.issuewire.com))** - Rundum Meir's side sliding façade doors are ideal for providing access for commercial properties, for example for delivery and plant vehicles. They also benefit residential buildings where domestic multi-user garage doors are required for special circumstances e.g. for car lifts.

Architects have the scope to design the bespoke garage door to either blend seamlessly into the building design or to create an impressive, stand-out feature.

Designers also have the option to create a round-the-corner garage door to deliver a stunning aesthetic feature along with side sliding garage doors that disappear from sight when fully opened.

Having an integrated façade garage door that slides into wall spaces, garages benefit with much more useable space and a less-cluttered internal environment. And by automating such garage doors, end users can integrate the side sliding garage door into their connected smart home or building management system for added security and convenience.

## Premium garage door manufacturer – Rundum Meir

Rundum Meir is able to use metal or timber materials in any finish to create beautiful bespoke garage doors. With an unprecedented level of design options, the company is able to match the aesthetics of the garage door to any building exterior.

The company collaborates closely with architects and clients, preferably at the earliest design stage developing the façade door concept and delivering on the design intent. Rundum Meir's particular expertise with handcrafting timber ensures that façade designs featuring wooden battens and cladding can be seamlessly extended onto the garage door with total consistency.

Rundum Meir (UK)'s Danesch Missaghian says: "There is so much scope in contemporary architecture to fully integrate side sliding garage doors into a seamless façade design, adding a 'wow factor' but also being more practical for end-users. Façade doors need no longer to be considered as niche as we have the design and technical expertise to guide architects on the right solutions to give complete confidence on its feasibility before a project leaves the drawing board."

With more than 50 years' experience and craftsmanship in manufacturing bespoke garage doors by hand-to the finest standards, Rundum Meir offers premium quality doors. Each garage door is created using the highest quality material – aluminum and wood. There are many different types of wood used also, including Spruce, Sapele, Hemlock, Cedar, Larch, European Oak, Douglas Fir and Iroko. Importantly, each door is constructed from the same or a number of trees or timber where possible to ensure color continuity and matching veining patterns.

To ensure lasting performance, all wooden garage doors are impregnated with an environmentally friendly base coat to protect against moisture ingress. This can then be finished after it has been delivered and installed or even during the production process.

Rundum Meir's aluminum garage door options are designed with insulated panels in a variety of finishes and colors, including a wide selection of RAL colors and unique faux wood options.
