Cryptocurrency exchange script source code for entrepreneurs

Madurai, Jan 28, 2020 (Issuewire.com**)** - Entrepreneurs are mostly frustrated in finding the ideal developers for visualizing their dreams. They are also quoted with a huge sum of money by the development firm to make their project. Imagine, if you are a budding entrepreneur who wished to start cryptocurrency exchange with small investment using the cryptocurrency exchange software?

We at Cryptoexchange4u introduce you robust cryptocurrency/bitcoin exchange script source code with a lifetime license. It's packed with numerous features and capabilities. This release note down its important elements.

Features of Crypto exchange script:

Buy / Sell Coins

- Simple Buy Coins Forms
- Automated approval on the payments via BTC and ETH
- API Based Current Rate Display
- E-Mail on Buy / Sell Status Updates
- Searchable Buy / Sell Records

Exchange

- Exchange Cryptocurrency to Fiat Currency
- One Time Password for Exchange Confirm
- Instant Approval
- Detailed History
- Searchable Records

Wallet Fund Transfer

- Members can transfer their funds from One Wallet (from one currency) to another wallet (to another currency)
- Exchange Rates automatically set via API Service

Member to Member Fund Transfer

- Members can easily transfer their funds using Fund Transfer Option following by the OTP (One Time Password)

Nginx Server

We used Nginx as a Server. Nginx provides greater stability and higher performance. With Ubuntu 16.04, Nginx is optimized for better performance and easy development in both development and Production.

Built with Laravel

Laravel is one full-featured developer-friendly and secure Application Development framework in PHP Eco System. We used Laravel Version 5.5 for this product development.

Powered with VueJS

VueJS Components are used in the codebase to make better code readability and better user experience.

NodeJs

NodeJs has been used as developer environment and also as the server to work with BlockChain Explorer and Ethereum
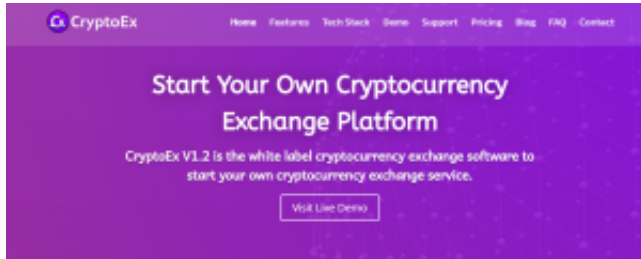

BitGo

For enterprise implementation of Multi-signature wallets, we used BitGo API and the BitGo Platform Services

Webpack

We used a web pack as a plugin to compile CSS and JS on the development environment. It gives the developer the flexibility to write maintainable code.

About Cryptoexchange4u:
