

KVAL Introduces Powerful “EFX” CNC Machine to the Commercial and Architectural Door Distributor

One Machine Does It All

Petaluma, May 14, 2020 ([IssueWire.com](https://www.issuewire.com)) - [Kval Inc.](https://www.kvalinc.com) introduces a new addition to its lineup of computer numerical controlled (CNC) machines. [The EFX machine](#) is the most versatile solution for the Commercial and Architectural Door Distributor and is the perfect option for machining the highest quality commercial doors in a small footprint, without breaking the bank.

“Our mission at Kval is to continuously invest in new technology, machinery development, and to stay cutting edge, pursuing long-term customer relationships,” says Nate Kvalheim, Sales Manager of Kval, Inc. “The EFX maximizes efficiency and productivity by machining a commercial door with 4 ½” square hinges (including pilot holes) and a cylinder lock in 3 minutes with only one operator. It’s armed with state-of-the-art features you won’t find anywhere else!”

The EFX offers the advanced technology of our existing Edge SS and Face SS to significantly reduce unnecessary labor and costly mistakes associated with machining architectural doors. Not only does it combine speed, flexibility, and accuracy into one machine, it is also software-driven by [KvalCAM™](#) —empowering users to easily program hardware templates including hinges, mortise locks, card locks, exit devices, overhead closers, door bottoms, and flushbolts without knowledge of G-Code or other programming languages.

See the EFX and more at: <https://kvalinc.com/features/efx/> or call us at (800) 553-5825.

About Kval Inc.: Kval Machinery (www.kvalinc.com) sets the standard for residential and commercial door equipment, specializing in high quality and innovative CNC machines for door manufacturers and distributors alike. Kval is family-owned and operated and has served the woodworking industry since

1947. Third and fourth generations continue the Kval legacy by leading the industry in CNC technology, state-of-the-art machine software, robust safety features, and provide our customers with cutting edge support solutions.
