COVID-19: Stages and Treatment

COVID-19 can be cured at home if necessary restrictions and guidelines are followed. It depends on the extent the disease has spread in one's body that influences the decision of whether one should self-quarantine at home or get admitted to a hospital. If you feel that your body is showing severe coronavirus symptoms such as regular coughing episodes leading to shortness of breath, muscle aches and tiredness, it is necessary to get admitted in the hospital as doctors in the hospital will provide you necessary advanced treatment and facilities that can't be acquired at home.

If your condition is serious, the doctors will want to run a few tests to understand the extent of the spread of the virus in the body. Initially, the possible things that doctors in the hospital will do are:

Level of oxygen in your blood will be checked with a clip-on finger monitor

Chest X-ray or CT scan

COVID-19 test which involves putting a cotton swab at the far-end of your throat and both sides of the nose.

The next stage is when the virus has attacked the immune system thus disabling its efficient functioning. This phase also called the pulmonary phase results in the formation of blood clots and respiratory conditions like shortness of breath, intense coughing fits, etc. At the stage, doctors suggest the use of tPA (tissue plasminogen activator), which helps in the breaking of blood clots. <https://orangecountycovidclinic.com/>

Rapid COVID-19 Nasal Swab Test. The Quidel Corporation Sofia SARS Antigen FIA test has received Emergency Use Authorization from FDA. Test data suggest the test has specificity of 100% and sensitivity of 93.8%. This test is great for quickly screening individuals for an active COVID-19 infection.

While the possibility of coronavirus (or COVID-19) spread remains in Orange County, we would like to provide a description of our new COVID-19 policies to keep local residents and their families safe and healthy. **We are testing anyone that would like to get tested for COVID-19.** We also accept most insurance plans to cover the cost of the test. If you don't have insurance we have affordable self-pay options. The COVID-19 PCR Test is approved under EUA-Emergency Use Authorization by the FDA. Testing is available every day from 8AM to 8PM. **Check-in online to get tested today!**

If you work for the Fire Department, Police Department, Hospital, or an EMT please check-in online to schedule your appointment. As a first responder, we understand the urgency of getting tested which is why our chat feature is available 24/7 if you have any questions regarding the COVID-19 test. Please bring your work ID or badge. **If you have a large group like a Fire/Police department or agency that needs testing, please let us know via chat and we can make some accommodations tailored to your business.**

The CDC (Center for Disease Control) recommends those either confirmed to have COVID-19 or those being evaluated for the virus to remain at home and to NOT visit public areas including work or school. Until a healthcare professional clears them for regular activity, these individuals should also refrain from using public transportation including ride-sharing services and taxis.

In order to prevent the spread of COVID-19, individuals who have either come into contact with others known to have contracted the virus or those being evaluated for a possible COVID-19 infection should monitor their symptoms. While the CDC has provided a list of possible symptoms — including fever, shortness of breath, and cough — it's important to note that not all individuals will experience the same symptoms and some may be asymptomatic, meaning they won't show any symptoms at all.
