

## New Roof Space Condensation Solution - Innovative Retrofitted Vent Installed From Inside The Roof Space

Retrofitted from inside the roof space, Kima's Inside-Out Vent provides a new fast and simple solution to condensation build-up without external works, scaffolding etc.

**London, Oct 30, 2020** ([Issuewire.com](http://Issuewire.com)) - Retrofitted from inside the roof space, [Kima's Inside-Out Vent](#) provides a new fast and simple solution to condensation build-up without external works, scaffolding etc.

Leading Danish manufacturer, KIMA Roofing Accessories, is delighted to announce that it has now introduced its innovative Inside-Out roofing vent to the international markets, providing both the professional trades, DIYers, and housing managers with the chance to solve condensation problems from inside the roof space, without the need for scaffolding or any external works.

The introduction of the Inside-Out coincides with a greater global awareness of the greener advantages of retrofitting existing housing instead of demolishing and re-building. It is against this backdrop that Kima Roof Accessories is expanding into international markets, having already embarked on a programme of expansion across Scandinavia and northern Europe.

Kima's Export Manager, Glenn Hansen, said, "Having successfully expanded across much of northern Europe, we are excited to be bringing the Kima range of roofing products to new markets, especially our innovative KimaAir Inside-Out ventilator, which we have developed to provide a solution to the almost impossible problem of retrofitting ventilators after the roof tiles have been laid".

Apart from the Inside-Out ventilator, the company has been instrumental in bringing a wide range of other innovative building products to the market, and the combination of performance, manufacturing quality and design has led to the firm producing both Kima labelled products, as well as those for own-branding by a number of leading manufacturers, suppliers and merchants. Kima's Inside-Out is now available via leading merchants and roofing specialists, and the company welcomes further enquiries from potential partners.
