Metatron Promises a Revolution in Crypto with Next Generation Staking Powered by TRON

The all in one platform for cryptocurrency staking and yield farming promises utmost security for investors through its deflationary XM Tokens.

San Francisco, Nov 9, 2020 (Issuewire.com**)** - Metatron is a next generation staking platform powered by TRON. The platform is gearing up for revolution in the cryptocurrency market by introducing the first all in one DeFi (decentralized finance) tools.

The company will ensure staking and yield farming with the utmost security to its investors through the deflationary XM Tokens. According to the spokesperson of the company, "XM is a highly lucrative Staking DApp platform. Developed from the ideas behind previous staking platforms, XM was designed with one thing in mind, the STAKERS."

The spokesperson suggests that by owning XM tokens and Staking them in Metatron's Staking Portal, investors will receive daily interest on their XM tokens as well as a percentage of the overall amount of TRX that enters the Auction Lobby daily.

As far as transparency and security is concerned, everything is controlled on the TRON blockchain by smart contracts. As such, there is no max supply while token price is solely derived from buying and selling markets.

Having just launched its XM Token Staking Platform, Metatron is also currently working towards launching its MetaSwap and XFarm Platforms, both of which are geared towards helping participants reap rewards on a regular basis.

For more information, visit the company's official website at https://www.xmtoken.io.

About Metatron LLC

Metatron is focused on creating the first all in one DeFi (Decentralized Finance) Platform.

Metatron's DeFi Platform will incorporate all of the various facets of Decentralized Finance into one DeFi Platform. Metatron's deflationary XM Token will offer rewards to all Daily Auction Participants and XM Token Stakers through Metatron's Yield Farming Platform.
