

Ultralake - The high-speed data lake solutions accelerator.

Xtraleap - an enterprise modern data & analytics solution provider, launches the high-speed data lake accelerator - Ultralake. A product designed to accelerate modern data lake journey for enterprises in days or weeks.

Ultralake

The high-speed data lake
accelerator that breaks through
the bond of traditional data
warehouses.

Guntur, Nov 20, 2020 (Issuewire.com) - Xtraleap, an enterprise modern data & analytics solution provider, launches the high-speed data lake accelerator **Ultralake**. A product designed to accelerate modern data lake journey for enterprises at a phenomenal pace, not months or years.

Ultralake is a purpose-built, custom-tailored, high-speed data lake accelerator. Ultralake is the epitome of modern data architecture.

Universal and loudly embraces open architecture; thus fits any cloud/on-premises deployments. Ultralake is also vendor-neutral and works with most of the leading open source and commercial data lake engines of your choice. That is powerful.

With the ever-increasing data volumes, new challenges arise. Modern techniques, technologies evolve to address those challenges. There are a myriad solutions in the market, and they aim to solve these data problems. Only a few are easy to work, and many are not. Of course, the skill gap is one of the factors that hinders adoption. There are several other obstacles for organizations to adopt like the technical complexity, lack of support, and necessary toolset. A slew of companies specialized in polishing open source technologies and offer value-added services, support, security, patches on time to time to fill the gap but those come with a premium price tag and lock-in.

Here is why our leaders at Xtraleap built Ultralake. Ultralake brings simplicity to the enterprise data lake management which could scale up to petabytes. Ultralake's core stack is on popular and proven open-source technologies like Spark, Hive, HDFS, Parquet, etc. These technologies are widely adopted and are running on production servers at several Fortune 100 companies. Ultralake value-added services can save a significant % of the software, implementation costs, and increase the ROI. Ultralake is the

best choice for enterprises to escape from legacy or expensive vendor lock-in. Come let's join forces to embrace modern architecture.

Ultralake data ingestion capabilities allow organizations to ingest, process, and gain fresh latest operational data insights all the time. Xtraleap consultants have had hands-on experience with several startups and open source technologies for more than a decade. Xtraleap value-added services returns on investment right from the first week and their data champion teams are evaluated through rigorous hiring processes thoroughly to serve customers better.

Ultralake Availability: Ultralake is currently available for select customers beginning Dec 1, 2020. Customers can sign-up to qualify for early release at [Latest Release - Ultralake](#). Start your organization's modern data journey with ease and see the results in days to weeks.
