Lahore, Dec 16, 2020 (Issuewire.com) - FiveRivers Technologies Announces All-New SmartWindows Application For Individuals And Enterprise Users

Working smart, improving efficiency, productivity, and meeting deadlines intelligently with a single, intuitive application

FiveRivers Technologies today announced SmartWindows, the latest addition to its portfolio of industry-leading products and services. This release is specially designed for both individual and enterprise users working in the technology-driven world of today.

[SmartWindows](#) is the best app for productivity representing a secure, reliable, full-featured desktop productivity tool consisting of simple, easy-to-use features. A one-click operation helps you maximize efficiency as well as organize your time and workflows effectively to stay on track with your projects. Whether you are a software engineer, data analyst, designer, office manager, or game developer managing multiple profiles, SmartWindows is all about working smarter - not harder.

“Our customers often ask about employee productivity tools, screen management software, and browser crash solutions. We are the first to introduce SmartWindows, a technological breakthrough that helps you concentrate only on the task at hand “ said (Mahe Zehra, CEO). “We understand that work is not always easy because everyone faces a road bump occasionally, losing steam with projects. SmartWindows is here to change all that” (Ali Hassan).

What is SmartWindows?

SmartWindows is THE organization and time management tool. When managing your to-do lists and multi-screen Windows 10 setup, or tracking progress with your team, staying on task is a critical first step. Also, as you do your browsing and research, chances are you experience IT-related issues. Whether it is an unexpected computer or browser crash or an unscheduled, untimely restart, you have to figure out methods to get yourself back on track.

<https://www.youtube.com/watch?v=NXPI1qshnto>

This is what makes SmartWindows unique. The application dynamically enables you to resume work almost instantaneously by conveniently reopening active applications or switching between projects. It picks up from your last session in the associated profile and painlessly guides you to every application that appears on your screens. SmartWindows eliminates the time and effort required to restore tabs one by one or navigate the entire browser history in the event of a PC or technical failure. The main menu on a user's system offers instant access to populated profiles without any IT clutter that causes further mix-ups and delays. Once users launch SmartWindows, it becomes even easier to monitor which tasks take up more time, allowing them to prioritize intelligently and optimize their approaches.

Why SmartWindows?

SmartWindows is based on the principles of delivering ultimate business value and unlocking productivity both short-term and long-term. To facilitate this, it overcomes the hurdle of focus for individuals and enterprises. The solution goes beyond catering to key problem areas, including how to restore previous sessions and tabs, manage multi-display programs, and reopen a closed browser. From allowing users to work with more than one workspace within Windows 10, relocate multiple applications, rewrite a profile to save new changes, and save browsers along with their URLs, it provides a complete range of solutions. In addition to maintaining an active tab history, customers can save browser position and size, lookup configurations, and close or minimize profiles in which they did not save applications.

For customers interested in multi-screen management software, SmartWindows helps every niche expand the desktop workspace. Spanning workspaces across two or more displays offers the flexibility that boosts comfort and productivity especially during business-critical scenarios. "Let's say you need a CRM open while you're serving your client, but you also must keep a customer chat window open, respond to emails, and browse the Internet. With all these applications taking up multiple screens, you need to simplify your multi-display life and manage work streams stress-free" (Saad Hussain/CMO). "SmartWindows streamlines the process of setting up monitors at work or home and makes it worthwhile for a user to get their browser tabs and applications just right".

SmartWindows provides the convenience of not requiring to set up a user workspace repeatedly with dynamic functionality that remembers application positioning on multiple displays and smart, one-click restoration. All these capabilities combined reduce interruptions and disruptions, making the modern work experience enjoyable and intuitive. **Features It Offers:**

Businesses can opt for a 30-day free trial with the following features:

- Create up to 3 profiles
- Save and restore profiles
- Single display
- Intelligent application positioning
- Regular updates

To unlock all the features, the SmartWindows application is available at a low cost of \$19.99/PC/year, with the option to cancel anytime for any reason.
