

The Best Electronic Component Distributor in India

E Control Devices is an Authorized Electronic Component Distributor in India dealing in various products like IoT products, Sensors, thermal materials etc.

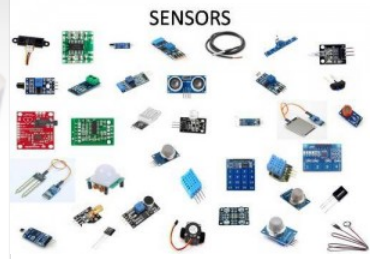

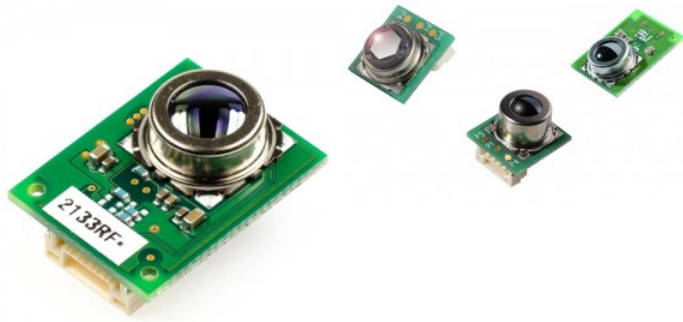

Faridabad, Jan 13, 2021 (Issuewire.com) - **E Control Device** is an Authorized **Electronic Component Distributor**. We offer exclusive deals on IoT solutions and services from the best brands in the world. Our objective is to bring for our clients the most in-demand and coveted IoT Solutions from leading manufacturers globally. Top-notch quality, standardized products with proven performance, seamless customer support services, and lowest price deals – these are some of the advantages that our industrial clients get when they shop with us!

We also have a full-fledged distinct section of IoT Solutions for our clients. IoT or smart sensors are faster and give more precise readings, they are smaller in size, help in reduction of operational costs, wiring and cabling costs are reduced and are widely used today in most industrial IoT devices.

We have the best-in-quality IoT sensors from top-notch and well-acknowledged brands from the world of industrial manufacturing. It has been ensured that technical specifications of the sensors are applicable to all kinds of Industrial IoT Solutions including but not limited to automotive, aerospace and defense, environmental monitoring, agriculture, transport, water level monitoring, solar, and more.

Revolutionary and groundbreaking technology that facilitates smart living and working, **IoT Solutions** include a range of sensors. Noise sensors, Temperature sensors, Gyroscope sensors, Image sensors, Chemical sensors, Gas sensors, water-quality sensors, Humidity sensors, Motion sensors, and Optical sensors are converting our homes, workplaces, factories, streets, hospitals, hotels, vehicles, and every other aspect of human life into smart environments.

Sensors are intelligent automated systems that intercept data from their surroundings and share the same with other connected devices on a network so that many critical day-to-day tasks are carried out autonomously in the backdrop.
