

Move Beyond and Try Thermal Insulation Coatings from SYNEFFEX Entire Spectrum

New York, New York City, Feb 4, 2021 (Issuewire.com) - To find the energy-saving effect provided by nanotechnology, you can select Thermal Insulation Coatings from SYNEFFEX. Thermal Coatings provides a multi-layered coating of protection for your exterior and make your home or factory well-insulated in an efficient way. It also protects from UV rays and improves Safe Touch areas and dramatically reduces heat transfer through it.

What is Thermal insulation coating technology?

Thermal insulation coatings minimize heat transfer between areas of differing temperature. It's very effective on industrial heat process equipment, building envelopes, and it is ideally suitable as a protective heat barrier to shield personnel from hot surfaces.

What are the Benefits of Thermal Insulation coating technologies?

With our SUSTAINABLE THERMAL INSULATION COATINGS, you will obtain Patented Nano-engineered Thermal Insulation and you can spray apply this technology easily while equipment is in-service.

- Energy Efficiency - Lower Energy Bills

- Reduced Rate of Factory Burn Injuries
- Prevention of CUI (Corrosion Under Insulation)
- Safe Touch
- Condensation Control
- Cooler rooms in summer
- Warmer rooms in winter
- Multi-purpose interior/exterior coating
- Helps your roof last longer
- Protection for paintings, furniture and carpets against sun/UV damage

Deliver Insightful and Intelligent Solution

SYNEFFEX is a leading provider of best-in-class protective energy saving coatings, trusted by large industries and businesses for sustainable thermal insulation coatings. We understand the needs of your problem and can recommend to you the insulation process which is crucial for you to make the right coating choice.

Syneffex thermal insulation coatings help organizations to improve energy efficiency with nano-engineered patented cutting-edge thermal paint coatings that provide next-generation performance beyond older, non-patented ceramic or fibrous insulation products. Furthermore, our products are eco-friendly and provide mold-resistant and anti-condensation properties without harmful biocides and other harsh chemicals, which is a significant plus for sustainability and safety minded companies.

So, take the right step for a healthy living climate and cutting energy costs with a wide variety of thermal insulating paint applications over equipment like pipes, pipelines, tanks, ovens, processing vessels, heat exchangers, and more. You can resolve corrosion-under-insulation (CUI) and prevent corrosion with nano-engineered patented cutting-edge Thermal Insulating Coatings. **SYNEFFEX** can be beneficial not only in roofing applications for energy savings and membrane protection, but for coating interior and exterior walls, steel or wood beams, pipes, and a wide range of specialty heat resistant coating applications.
