

Siora Surgicals Introduces Wide Range of Hip Prosthesis Implants and Instruments

Delhi, New Delhi, Feb 4, 2021 (Issuewire.com) - Siora Surgicals, a company focused exclusively on advancing the field of orthopedic implants and instruments is grateful to launch its Hip Prosthesis.

The hip is one of the most important joints that support our body. If your hip has been damaged by arthritis, a fracture, or other conditions, common activities such as walking or getting in and out of a chair may be painful and difficult. Hip replacement surgery is one of the most successful operations in all

of medicine. A [hip prosthesis](#) is a medical device that replaces a damaged hip joint. The hip consists of a convex femoral head inserted into a concave acetabulum within the pelvis, cushioned by an articulation synovialis capsule.

Hip implants can be realized with different combinations of materials, such as metals, ceramics, and polymers. In a total hip replacement, the damaged bone and cartilage are removed and replaced with prosthetic components.

The damaged femoral head is removed and replaced with a metal stem that's placed into the hollow center of the femur.

A metal or ceramic ball is placed on the upper part of the stem. This ball replaces the damaged femoral head that was removed.

The damaged cartilage surface of the socket (acetabulum) is removed and replaced with a metal socket.

A plastic, ceramic, or metal spacer is inserted between the new ball and the socket to allow for a smooth gliding surface.

Being one of the top leading orthopedic implant companies in India, we at Siora Surgicals Private Limited provide a wide range of orthopedic implants and instruments used in the various anatomical fractures of the human body. Siora Surgicals provide all implants and instruments for a hip prosthesis. Here you can see our product categories:-
