

SpotBus develop a Three-way solution for Live School bus tracking.

Intelligence At Your Fingertips For A Smarter School Bus Experience SpotBus is an app that comes with all benefits of tracking your kid's school bus but without the need of setting up and maintaining local transportation management system.

Massachusetts, Westborough, Feb 2, 2021 ([IssueWire.com](http://www.IssueWire.com)) - SpotBus develop a Three-way solution for Live School bus tracking.

Westborough, Massachusetts

SpotBus develop school bus tracking application, it's a three-way blended application with School/transportation department, Bus driver and parents makes it a unique solution for everyone.

Thinking about safety, security, and time management in our daily life SpotBus idea became a reality. The own company founders came up with the idea after facing issues in their everyday life and develop SoptBus. The application not only limit to itself up to tracking features, but it's a complete overall solution anyone can ask for their school buses fleet.

It's a three-way solution to School transportation department/ Transportation company, School Bus driver, and Parents.

SpotBus provide a user-friendly easy to use the portal to the school transportation department/ Transportation Company, which can be used by anyone. The portal helps in tracking the moment of school buses and shows the assigned Route. It also has detail information about bus driver records and can even see the interaction level with the application. The portal function not only limits itself to only these features but can also send a notification if there is any diversion of Bus on Route.

The bus driver can look out for the Route direction from and location of kids picks and drop.

The SpotBus Parents application has a variety of features other than LIVE tracking of school bus they can get a notification on delay and diversion, can set customized alarms.

Key features

Customizable reminder & alarms: In the SpotBus application, parents can set the alarm according to their flexibility.

Live GPS Tracking: SpotBus tracking feature is live and can ETA up to one minute of buses. (Similar to uber)

Push Notification: In case of diversion of Bus from its assigned Route or any delays can be reported to SpotBus immediately to its users. SpotBus user will also get a notification every time school bus pick-up and drop. (Which can be customized)

Route Navigation: SpotBus already have AM/PM Route installed, which assists the driver in knowing which Route to travel.

User-Friendly Interface: SpotBus application and portal both are effortless and accessible to use. SpotBus portal for school administration/ Transportation companies is much easier to use than any other logistic software.

Benefits

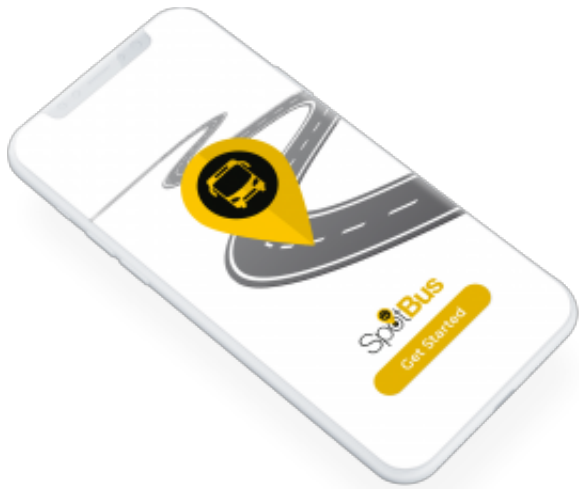

Peace of mind: SpotBus users can locate, track and know the whereabouts of their kids and can feel safe.

Hassle-Free Management: School administration and Transportation company's portals not only those to track their bus fleet but having can also help in managing all records of drivers. In the case of diversion and delay, parents are already informed through application notification, which also assists in fewer phone calls.

Time Management: SpotBus application helps in better management of time in everyday school travel. It can help users to plan their walk to the bus stop, especially in harsh weather conditions.

SpotBus is reinventing the Live school bus GPS Tracking system for administrators and parents. The company has developed a complete integrated software solution with its SpotBus parent's mobile application, SpotBus Driver mobile application, and Logistic portal for administrators, which can give ETA up to one minute of the school buses. SpotBus application and administrator portal have many amazing features like push notification and set customized reminders, which is made by keeping in mind its customer. The company provides its services all across the USA and panning to expanding its operation in coming to a few years in North American.
