Follow the simple stepwise processes given below to set up your printer for a USB connection on a computer with Windows OS, macOS, or Chromebook.

Instructions to set up a USB printer connection for a Computer with macOS

Following is the series of steps to help you in setting up a USB printer connection for a computer with macOS:

- 1. In case you have an existing connection between the printer USB cable and your computer. Then, you have to disconnect it right away and then remove the printer from your desktop.
- 2. Tap on the Apple icon, then choose the option for System Preferences and then tap either on the Printers & Scanners, Print & Scan, or Print and Fax.
- 3. Click to choose the option with your printer's name, and then tap the cursor on the Minus sign.
- 4. After that, you have to restart your Mac.
- 5. Later, you have to make sure that an open USB port is present on the macOS computer. Try not to connect the printer and the USB hub or docking station; it can result in an improper power supply to the printer that causes improper operations by the printer later.
- 6. Visit the Mac App Store to search for and download the **HP Smart App**.
- 7. You will have to wait for a moment to open the app.
- 8. After the app opens, you have to use the on-screen installation guide to complete the process.
- 9. If the setup is still not beginning itself, click on the **Plus** sign to add your printer.
