Karnataka, Bengaluru, Apr 3, 2021 (Issuewire.com) - HappyMongo, the leading Bangalore-based Edutech company, has officially launched its latest offering – An AI Innovation Lab for students across the nation, from LKG to Grade 12. Along with the lab, their innovative Coding and AI platform called [FutoLearn](#) has also hit the market.

The AI Innovation Lab is the first Hybrid model of its kind that gives schools and their students the option to learn Artificial Intelligence & Coding modules via both online and offline modes. While the FutoLearn AI platform is available for digital access, the AI Innovation Lab will provide Hardware AI and Coding Projects for practical on-ground support.

As avid supporters of utilizing Technology in the classroom, [HappyMongo](#) recently presented their AI and Coding model to CBSE board members, where it was greatly appreciated.

So far, HappyMongo has set up AI Innovation Labs in schools such as Delhi Public School, MITCON, Pallavi (Macherial), SSVKM and New Horizon among others.

[Megha Naveen](#) states “We are extremely pleased and excited to bring the AI Innovation Lab to the school campus. Our primary intention is to offer these schools a unique and advanced model to their students, in order to boost their admissions. The secondary reason is to make sure every Indian student receives the guidance, exposure and opportunities associated with a life and career supported by the latest technology. India is a big market for Technology experts and the earlier our students master subjects such as Coding and AI, the better it will be”.

She adds, “As a special bonus for schools during these times, we are offering to install the AI Innovation Lab on their premises immediately, giving them the freedom to pay for it at a later date. This will allow schools to try the product and let it speak for itself!”.

About HappyMongo

HappyMongo, as an educational technology company, recognizes that each individual is different; we consciously design products at various levels to personalize the learning programs. Our unique combination of interactive digital workbooks, web apps, and mobile apps encourages children as young as five years to appreciate and embrace technology. Likewise, our remote classroom solution empowers educators by eliminating the need to organize a class and focus on only helping children achieve overall development in communication, aptitude, life-skills and personality.

HappyMongo commenced its operations in 2016; headquartered at Bangalore and has established branches in Singapore and Sri Lanka. We also have well-connected channel partners across the globe in UAE, Australia, UK and USA. HappyMongo's notion to develop into an educational company came from this very need for non-traditional learning methodology that encourages self-directed and independent knowledge building which is constructive for learners who want to exercise their flexibility and individuality.
