

MiniTool Software Rolls out MiniTool uTube Downloader 3.0.2

British Columbia, Vancouver, Apr 27, 2021 ([IssueWire.com](https://www.issuewire.com)) - MiniTool® Software Limited just released the latest version of MiniTool uTube Downloader V 3.0.2. It optimizes the video playlist download speed and fixes some bugs in the previous version. Windows users can get a better video download service from this new version.

MiniTool uTube Downloader 3.0.2 has the following improvements and bug fixes:

Optimized Video Playlist Download Speed

Users care much about video downloading speed. MiniTool uTube Downloader has noted this problem and speeded up its YouTube playlist download speed to save more time.

Select All Videos in the Playlist by Default

In the previous version, the software doesn't check any video in the playlist for download when reaching the video selection interface. In MiniTool uTube Downloader 3.0.2, it selects all videos in the playlist by default for convenience. Users can uncheck the videos they don't want to download.

Unify the Video Number Displayed in the Software and the YouTube Playlist

At times, a YouTube video playlist contains duplicate videos. MiniTool uTube Downloader can detect these videos and only show one of them in the video selection interface. So, the playlist video number in the software interface can be less than the number in the YouTube platform. This confuses some users. To dispel this doubt, MiniTool uTube Downloader 3.0.2 removes this quantity difference to be consistent with the YouTube platform. Users can remove the ticks for duplicate videos as per their requirements.

Break the Playlist Video Display Number Limit

In the previous versions, MiniTool uTube Downloader shows up to 100 videos in a playlist even when there are more than 100 videos in the playlist. More and more users put forward an advanced requirement to remove this limit. MiniTool Software remove the limit in MiniTool uTube Downloader 3.0.2. Now, this software can show all videos in a playlist for users to download at once.

Keep User Custom Settings during Software Upgrade

Previously, all users' existing settings went back to the default settings after upgrading to a new version of this software. Users need to modify the settings again in the new version. MiniTool Software has made a change in this aspect. It makes the new version keep users' custom settings.

Multiple Bug Fixes Fix the Incomplete Video Subtitle Download Problem

Some users reported that the video subtitles they download are not complete. MiniTool uTube Downloader has found the causes of this problem and fixed this bug in the new version.

Fix the Inconformity of Searched and Downloaded Results

A few users reflected that the videos they downloaded finally are not exactly the same as the search results. MiniTool Software has fixed this issue. In MiniTool uTube Downloader 3.0.2, this inconformity will not appear.

About MiniTool uTube Downloader

MiniTool uTube Downloader is a free YouTube video downloader. Users can use it to download YouTube videos to MP3, MP4, WAV, and WebM. It supports high-resolution video and high audio quality output. Users can also use it to download YouTube video subtitles.
