

RoofSmart Roof Walkway Pads Protect The Roofing Investment

The building roof is a major investment RoofSmart roof walkway pads protect the roofing investment.

California, Simi Valley, May 20, 2021 (Issuewire.com) - It is usually assumed that given that workers aren't on a roof daily that worrying about how your roof manages foot traffic isn't vital. However, nowadays more than ever, roofs have more foot traffic than you may realize. The common building rooftop is becoming a packed place. Technology like Wi-Fi antennas, satellite and microwave dishes,

mobile phone communication devices, and solar power panels have joined HVAC systems, pipes, channels, canals, skylights, and more, all needing access and maintenance.

RoofSmart Roof Walkway Pads are the Solution

RoofSmart [Roof Walkway Pads](#) are made of thermoplastic material. Walkway pads have a slip-resistant surface for safety and a smooth bottom surface allowing for easy welding to roof workers. These pads can control traffic flow and should be designed with structure and safety as concerns.

A building's roof is a major investment. RoofSmart Roof Walkway Pads are an affordable method to protect that investment from one of the main reasons for roof damage-foot traffic. When combined with [ladder stabiliser brace](#), they can also make rooftops a little safer by directing traffic along the least dangerous paths and by providing a textured walking surface to reduce slips and falls in all climate conditions.
