

# **Linepro has introduced a new technology :Transparent Flexible Heater**

**We Enhance the Face Value of Machine**

**Maharashtra, Thane, Jun 21, 2021 ([IssueWire.com](https://www.issuewire.com)) - Thane, Maharashtra: Linepro Controls Pvt. Ltd.** introduces a new technology; **Transparent Flexible Heater**. A transparent Flexible Heater is a device that is used for raising the temperature inside a room or any vehicle or any equipment by maintaining a temperature in which people are comfortable and all the machinery is functioning smoothly.

**Transparent Flexible Heaters** can be used in regions where the temperature goes below zero degrees Celsius, for heating the surface that needs to be cleared of snow, ice, fog, or condensation. The transparent nature of the heater allows the heater to be pasted on any product which requires a see-through surface. For example, the printed heater can be pasted on a touch panel. Since it is transparent, it would not lead to any difficulty in viewing the panel.

Transparent Flexible heaters also have various medical applications. Winter can be a season of pain for people with Arthritis. These heaters can be incorporated into heating pads which can help in reducing joint aches.

Other application industries for transparent flexible heaters include Automotive, Apparel, Aerospace, Defense, Foodservice, consumer products, and public utility machines to name a few.

**“Man is changing the world with technology; Transparent Flexible heater is one such technology which can be a boon to various industries,”** says Paul Malpan, Managing Director at Linepro Controls Pvt Ltd.

**Features and benefits of Transparent Flexible Heater include.**

- Thin, Transparent, and flexible
- Simple and lightweight
- Can be easily pasted or incorporated into various devices
- Durable in harsh environments
- Increased safety
