

# The Surprising Truth about Role of Estanislao Ricardo Miller Vice President

Estanislao Ricardo Miller

**Argentina, Buenos Aires, Jun 28, 2021 ([Issuewire.com](http://Issuewire.com))** - Estanislao Ricardo Miller Vice President at Miller Building International. His role as a Vice President of Manufacturing is to serve as the company visionary. Estanislao Ricardo Miller plays a major role in the formulation of company policies and goals directly related to company growth. The Vice President of Manufacturing is different than an industrial production manager who is more responsible for the direct oversight of manufacturing operations. As someone who has the company's growth in mind and has a vision for the company's future, [Estanislao Ricardo Miller](#) the VP of Miller Building International has a heavy influence on the planning, implementation, and directing of all manufacturing activities. In larger companies, he may do this through the direct supervision of industrial production managers. Planning revolves around the development of long- and short-term company goals, while implementation and direction of manufacturing activities ensure that these goals are met. He plays the role of both cheerleader and whip, motivating production managers through encouragement and coercion, if necessary. This is the management aspect of the VP's job. Estanislao serves as the primary person to which the other production managers must answer, although in larger companies he may, himself, also answer to superiors such as a President. He also oversees budgetary issues related specifically to manufacturing and production efforts. Estanislao Ricardo Miller is required to provide technical direction to the company as needed. This is one reason why some industrial production managers naturally progress to

the manufacturing director positions like that of a Vice President. He has the technical knowledge of the manufacturing process after having been directly in charge of it for a period of time. He may bring technical expertise from other fields, as well. The direction he provides is generally in overseeing the continued efficiency of the manufacturing process by ensuring that the company has the necessary technology to compete with other companies. The procurement of new equipment is sometimes necessary for this, and as the vice president, [Estanislao Ricardo Miller](#) will use his financial management skills in this context.
