

Electric Scooter Company, Varla Scooter, Manufactures Electric Scooters For The Ideal Riding Experience

We worked with a design group and made a unique scooter based on most Varla riders' needs.

VARLA

California, El Monte, Jul 28, 2021 ([Issuewire.com](https://www.issuewire.com)) - California-based company [Varla Electric Scooters](#) sells electric scooters for every occasion. The scooters they sell include the Varla Eagle One Electric Scooter and the Varla Pegasus Electric Scooter. Both models have been receiving great feedback from the company's customers.

Varla was founded by Ben, who, after designing one scooter, got the idea for Varla and then went for cooperation two years ago. In 2020, during the time of Covid-19, the company wanted to give people safer ways to travel, so through teamwork, they created the ideal electric scooter.

Electric scooters became popular over the years due to the convenience they offer. They provide a fast and safe way to travel. They run on rechargeable batteries and are very environmentally friendly.

The Varla Eagle One Electric scooter is perfect for an off-road trip. It has a top speed of up to 40 MPH and a 1000wx2 dual hub motor which can provide a peak power output of 3200W, powered by 2 x25A speed controllers. This keeps the e-scooter performing at its optimal level at all times.

There is also a big power dual motor that makes it easier for riders to tackle all types of terrains. For persons who enjoy mountainous terrains, the Varla Eagle One scooter is perfect as it can handle up to 30-degree slopes and be driven on rough roads easily. This e-scooter has already received multiple 5-star reviews from customers who have bought and tried it.

The other Varla e-scooter that offers riders the best experience is the Varla Pegasus electric scooter. It is mainly developed for city commuters and has a maximum power output of 1600W and a battery capacity of 48V 15.6Ah, allowing riders to go the distance. Plus, the range of 28 miles and climbing angle of up to 25 degrees is suitable for commutes near and far.

So many times, scooter riders get punctured tires which can affect their speed and even be dangerous. But with the Varla Pegasus Electric scooter, you can worry less about punctures as the puncture-proof solid tires give extra protection when commuting from one point to the next.

The company made its first 100 sales in December 2020 and made up to 5000 sales by June 2021. They have garnered much popularity for their electric scooters that are perfect for regular commutes and adventures.
