West bengal, kolkata, Jul 20, 2021 (IssueWire.com) - Former CEO soumik Saha Ahead of launching India's First Tech Lab for the tech Revolution in the upcoming year.

soumik in the last press conference mentioned he is planning to launch a Tech giant Lab along with Digital investors to overcome solutions of modern required in a great space.

"Innovative Lab Research India focuses on research that impacts science, Microtechnology, and society at large. Our work is inter-disciplinary, and we blend theory with practice and computer science with social science. We work not only on great ideas but also implement, deploy, experiment, contribute to and learn from the world around us. We are ready to collaborate freely with academia, NGOs and startups, and also play an active role in mentoring and training young researchers and technologists

One of Innovative Lab Research India's goals is to help strengthen the research ecosystem and encourage young Engineer to look at research as a career. The Research Fellow program at Innovative Research India enables bright young Engineers to work on real-world research problems with top-notch researchers across the research lifecycle, including ideation, implementation, evaluation, and deployment.

The total budget in this project is 11cr many young investors are ready to work with us maybe we can raise more funds to bring this project a good value. currently, we are researching the latest technology to provide a good output to the user. In our Lab we are going to set up a research environment to work on multiple projects like Some Geo location problems, satellite work on, some real-life problems, etc. we already set-upped some research base on Bangalore, Kolkata, Jaipur and still we are moving on to the other states.

we are aiming to complete this project on or before 2023

largely I am inviting to the young Engineers to come up with us to make it succeed. I still believe India can become a great innovative research lab in the upcoming future in a short span of time in the computer technology field
