

Anatomy Coloring Book: Head to toe technicolor anatomy that will amaze. Its science through art.

Biology study drawings that just erupt off the page!

SCIENCE THROUGH ART STUDY GUIDE

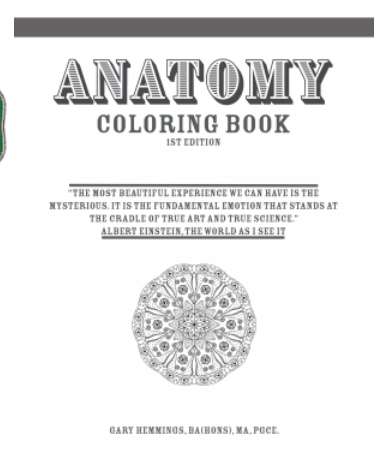

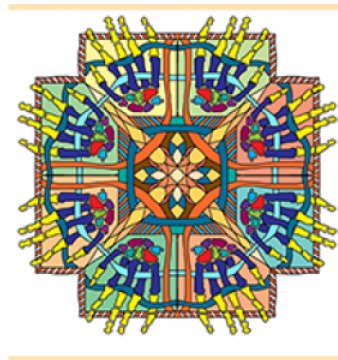

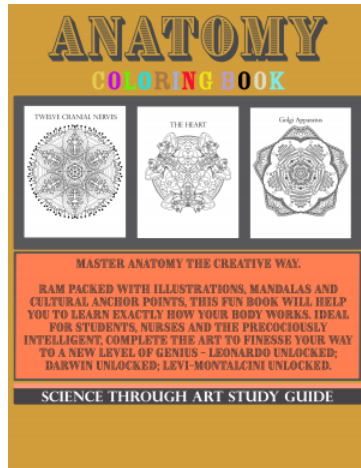

ANATOMY

COLORING BOOK

The title 'ANATOMY' is written in a large, bold, black serif font. Below it, the words 'COLORING BOOK' are written in a smaller, bold, sans-serif font, with each letter in a different color: C (yellow), O (orange), L (green), O (red), R (purple), I (blue), N (cyan), G (magenta), B (black), O (white), O (grey), K (light blue). The text is flanked by decorative anatomical illustrations. On the left, there is a black and white line drawing of a skeletal structure, possibly a ribcage or spine. On the right, there is a colorful illustration of a skeletal structure, possibly a hand or foot, with various bones colored in yellow, blue, and red.

United Kingdom, West Yorkshire, Aug 29, 2021 (Issuewire.com) - Gary Hemmings' 'Anatomy Coloring Book' really is something else - pens at the ready, you'll surprise yourself in how absorbing it is to complete the colour-coded mandalas throughout this thought-provoking publication. A book that serves a dual purpose as a learning tool and an artwork project, you'll be sure to up your game with a triple serving of art, anatomy, and philosophical commentary from the world's leading thinkers. This is by no means child's play, but, no matter what your age, this book makes an excellent gift for those interested in science, art, or the human body. Consider your Christmas gift list to need one fewer present idea – at least one person you know is sure to love this book.
