

MobilityGuru introduces new dimensions of convenience and security to the mobility community

GURU continues to shape the future of the mobility community.

United Kingdom, London, Sep 9, 2021 ([Issuewire.com](https://www.issuewire.com)) - MobilityGuru is tapping into a multi-billion business that is steadily growing every year. At the same time, the crypto sector just crossed the trillion-dollar valuation in 2021. What was once a niche market reserved for technically advanced users is now a lucrative investment avenue for institutional and retail investors alike.

And while Bitcoin and Ethereum may be out of the scope for most investors, altcoins present a good entry point into the crypto market. We've come a long way since Bitcoin was worth \$0.0008c 12 years ago as it made its way to \$300 then \$5,000, \$17,000, and the all-time high of \$64,000.

Such a phenomenal growth has led to many analysts projecting Bitcoin reaching \$500,000, sending the crypto market valuation past \$30 trillion. As adoption and awareness of Bitcoin increases, there are even [projections](#) of it 'overtaking the US Dollar by 2050'. And that is just one of the many scenarios.

However, what most people don't know is that some altcoins have demonstrated even better gains than Bitcoin – some as high as 400%. This is the case because altcoins are backed by the infrastructure of the project they're tied to as well as their real-world utility and team's authority. These are all contributing factors to the potential growth of an altcoin.

The mobility sector is in continuous need of credible, traceable, and updated means of exchange of

products and services between buyers and sellers. As the number of people living with a disability increases globally, so does the demand to present a unified solution that meets their needs.

MobilityGuru introduces the largest B2B market for people in the mobility community to buy and sell services and products. With an already up-and-running platform, one thing that will help global reach is bringing the GURU token one step closer to adoption.

GURU is definitely posed to be a game-changer Token within such a massive market share. The GURU token can be summarized as a payment, utility, DeFi, governance, and social token!

Investing in the GURU token can give early-stage investors the return on investment that other altcoins they've missed out on. Profitability in the crypto sector often lies in early entry into a project with strong potential. When all indicators and conditions gather to support your purchase decision, the earlier your entry, the higher your reward. When you buy into the MobilityGuru project, you enter the ground floor of our growth. Meaning your window of profit is way larger than any late entry point.

Every new successful technology faces the adoption curve when introduced to the market; the early adopters represent the group of people (Users and token holders) who identify and capture the opportunity in the early stages. And create a level of certainty by actually using the product or reading the project whitepaper and users' feedback to know the value the technology brings to the market. The first-movers enjoy the leverage of the most considerable long-term profit window. Currently in IEO on [Exmarkets.com/launchpad/guru-btc](https://exmarkets.com/launchpad/guru-btc) and will be listed for trading on the 15th of September.
