

SourceLess Blockchain: Introducing the New Web

A decentralized application for extending your internet or cloud-based system by giving users access to their data using blockchain, web3, distributed ledger technology and p2p.

The graphic features a dark blue background with a central circular motif of concentric lines and a key. Surrounding the key are various icons: a fingerprint, a shield, a padlock, a smartphone, a cloud, and a Bitcoin symbol. The text 'HYBRID BLOCKCHAIN' is written in large, bold, light blue letters at the top. To the right, 'PUBLIC & PRIVATE' is written in a similar font, stacked vertically. At the bottom right, the SourceLess Blockchain logo is displayed, consisting of two hands holding a stylized 'S' shape, with the text 'sourceless BLOCKCHAIN' below it. In the bottom right corner, a teal circle contains the text 'FOR YOU' in white.

YOU

Romania, Constanta, Oct 4, 2021 ([IssueWire.com](https://www.IssueWire.com)) - [Sourceless](https://www.SourceLess.com) It is designed in such a way that it cannot retain any data from its users because it assigns all of their rights for storage on the blockchain and DLT, without any human access. SourceLess Hybrid Blockchain is a combination of a public and private network, with a blockchain-hosted identity and security access. The best way to describe SourceLess Private Blockchain: A restricted participation that is controlled through Blockchain wNFT

inside a Node. SourceLess Public Blockchain: Full community access to all members. And SourceLess Hybrid Blockchain – Benefits of the Private Blockchain – as company documents (private ones) and web data, which are publicly viewable – in this case, Public Blockchain benefits.

Our blockchain is a digital ledger that cannot be altered. It is used to store data, which can be anything from cryptocurrency transactions to content. It is not in the control of one person or company but instead, it is shared by all of the participants in the network. It can be used in three different ways: private, public, and hybrid which makes it impossible to be manipulated or hacked.

Today, the need for a decentralized and secure network is growing with data breaches and data leaks happening on a daily basis. There are also many business opportunities that are not possible to fulfill with the current centralized infrastructure. The hybrid network is the world's most advanced Blockchain infrastructure. It contains all the key features of a public Blockchain, such as secure, transparent, immutable, and decentralized, but also rest. Our new web provides endless possibilities for businesses to build their decentralized apps on top of it, no matter which programming language, with the help of Open Ai.

#NewWeb is a revolutionary invention, which eliminates the need for a third party to establish trust. It is a decentralized database that keeps track of transactions and records them in packages called blocks.

It also integrates many other technologies such as Codex from [Open AI](#), [Formwelt](#) into a wNFT to help every person who owns str. Domain to access them.

Technically, Open Ai's Codex is the only data intelligence platform or Future AI, which provides text-to-code, and similar, unique software of its kind, while Formwelt is a language-independent application that can be used to communicate in any language with a person of any nationality.

While the internet is getting slower and slower and it's almost fully booked as Domain Name Registry (there are more than 1.8 billion domains – and growing). We offer a #newweb that is much faster, with maximum security, and a fresh new mapping (STR.Domains) to solve this problem.

With complete control and transparency, your digital assets will be secured and stable in a new, innovative way, and most important, owned by yourself!

Sourceless Inc. or SourceLess Blockchain is best defined as a Blockchain, trying to use the best part of private and public Blockchain solutions. In an ideal world, a SourceLess Hybrid Blockchain will mean both controlled access and freedom.

SourceLess Hybrid Blockchain architecture is distinguished by the fact that they are not open to everyone, but still offer Blockchain features such as integrity, transparency, and security.

As usual, the SourceLess Hybrid Blockchain architecture is completely customizable. SourceLess Hybrid Blockchain members can decide who can participate in the Blockchain or what transactions are made public. This brings out the best in both worlds and ensures that a company can work with stakeholders in the best possible way.

We hope you have a clear view of the definition of SourceLess Hybrid Blockchain.
