

What is Bitcoin Global? Everything you need to know about BIG?

United Kingdom, London, Oct 18, 2021 ([Issuewire.com](https://www.issuewire.com)) - What is Bitcoin Global? Everything you need to know about BIG?

Bitcoin Global was born on 15/09/2021 and officially launched in the market on 15/10/21, exactly one month after the revolutionary blockchain development.

What is BitcoinGlobal (BIG)?

BIG is a Bitcoin fork; this cryptocurrency has a clear purpose. To offer network scalability, reduce the transaction fees, and increase the ability to conduct micro-transactions securely and privately. It works with the NIST5 algorithm and offers unequalled confidentiality. BitcoinGlobal is your solution for decentralized Blockchain platforms.

NIST5 is an award-winning algorithm (US National Institute of Standards and Technology Hash Function Competition) which have been proven to be more secure and power-efficient than the latest state-of-the-art encryptions.

But it's not only limited to that; for us, a Blockchain-based ecosystem will offer a set of decentralized services. We can mention, for example, decentralized data storage, social networks, and hosting.

It is not a mere copy of BTC and works thanks to a Proof of Work method. This token is designed to protect its users' privacy transactions that are not traceable, which constitutes one of the biggest differences from other crypto-currencies.

Top 5 benefits

- Fast transactions, faster than Bitcoin (Lightning Network)
- The best algorithm as of today (NIST5)
- Diversifying blockchain project with scalability
- Everyone can mine it (unlike Bitcoin, where costly equipment are needed)
- Atomic swap

Bitcoin was founded by Satoshi Æ who was inspired by the Bitcoin founder Satoshi Nakamoto.

BitcoinGlobal road map is set up to achieve the following milestones :

Develop Bitcoin Global NFT, Further Lower Fees and Faster Transaction, BIG Pay Buttons for Merchants & Improve Benefits for Merchants, Full UTXO Merkle root commitments, Schnorr signature algorithm, Block propagation or block propagation time, Full-node in the network, OP_CODES on another blockchain, Signature Hash in BitcoinGlobal Nodes and Eco System Mining.

BIG has a huge potential as it's one of the most secure cryptos right now. So, it's time to familiarize yourself with BIG, 69 000 000 premine, and only 99 000 000 total supply. The transactions are faster, so companies and consumers could adopt them. We have increased the circulation to meet market demand and surge block size up to 10MB without compromising the security of our blockchain unlike other Bitcoin forks in the market.
