

BlueFish Hot Tubs - Wales' Most Energy Efficient Hot Tubs - NOW AVAILABLE IN WALES

South Wales, United Kingdom Nov 17, 2021 ([IssueWire.com](https://www.issuewire.com)) - BlueFish Energy-Efficient Hot Tubs are now available in Wales! We've always been passionate about finding the most energy-efficient and premium quality hot tubs available, and we're delighted to be able to now offer them in Wales.

We are part of the Spa Care UK family. Their reputation for top quality, value for money hot tubs is as well known across the UK - but until now, you've had to rely on ordering from a non-local company based in England.

BlueFish Hot Tubs is a family-owned business, based in South Wales in the UK that sells some of the world's most energy-efficient hot tubs from the likes of Sunbeach Spas, the award-winning UK hot tub designer, and Oasis Spas, the Australian-made brand famous around the world. We are a small company, but we have been involved in the hot tub business for several years and are expanding rapidly.

The good news is, you can now enjoy all the benefits of the world's most sophisticated spas, built with a high-quality exterior shell using the highest standards of quality and safety, at an affordable cost, and with rising energy prices, you won't need to worry about the long-term impact on your wallet.

Award-Winning Insulation

Our suppliers are leading the way in insulation innovation for their products. Both Sunbeach Spas (Our '[R10 Range](#)') and Oasis Spas (Our '[R18 Range](#)') use layers of high-density foam which reduce heat loss significantly, saving the burden on your pocket and the amount of energy you use.

The award-winning R10 insulation offers up to 60% energy savings. Tests done in 2020 showed the average monthly running costs are around £14, compared to £47 with a standard hot tub.

All R18 Hot Tubs feature industry-leading insulation and heat retention, meaning they too will cost far less to operate than a conventional tub. Each tub is built with a 6-layer insulated American Acrylic shell and is further insulated with R18 wall-to-wall full foam.

In fact, this award-winning insulation helps make our tubs the most energy-efficient on the market today, with many other spas typically using only 2 or 3 layers of foam or less.

These are just some of the reasons why BlueFish Hot Tubs are so popular - the premium look and feel the range of features and benefits and the high quality of construction.

Our R10 and R18 Insulated Hot Tubs are all available to buy from our online store. If you're ready to enjoy one of our energy-saving hot tubs, delivered within 7 days, then [visit our website](#) to secure yours now!
