Pembroke Pines, Florida Dec 2, 2021 (Issuewire.com) - Periodontal treatment focuses on the inflammatory illnesses that affect your gums and the supporting tissue around them. If you've been told you have periodontal disease or gum disease, you should contact Dr. Richard Salzmann, as there are many cases that fall into this category and that our doctor can help with. Call our Periodontist at (954) 639-6998 right away.

Periodontal Disease is a serious condition that can lead to tooth loss

Gum disease, also known as periodontal disease, is determined by how well you care for your teeth. It can even worsen if you fail to see your general dentist for a thorough, preventive examination. If you are a patient with periodontal disease, please contact our dental office to schedule an appointment with [Dr. Richard Salzmann](#), our Periodontist. The mouth is full of germs that produce plaque on a regular basis, which if not cleaned properly can lead to a variety of oral health problems. Flossing and brushing recommendations on a regular basis is essential for optimal dental health.

When plaque is not properly cleaned, it can harden and create tartar, which can lead to gingivitis. Periodontitis is the name given to the acute type of gingivitis, which causes your Periodontal disease to worsen. This results in gaps or pockets between the tooth and the gum line, which leads to bone loss.

The effect of untreated periodontal disease is bone loss. Bacteria spreads beyond the gum line. If you have lost a tooth due to periodontal disease, you will be given correct treatment guidance, followed by a suggestion for [Dental Implants in Pembroke Pines](#), which may be the best option for you.
