He is also adept at leading larger teams as well as working independently, which has allowed him to deliver solid results for many businesses over his career.

The two most important words in problem-solving are, I don't know. Not only will Brett admit when he doesn't know an answer, but he also refrains from making assumptions and presumptions. By asking lots of questions and utilizing every resource available, including other team members and vendors; he gathers as much information as possible on how best to solve a problem in a timely manner.

There is no frantic running around looking for answers or trying different strategies until something works. Rather, Brett plans out each stage with his eye towards efficiency and effectiveness so that obstacles can be identified early on without wasting any time or money.

It's important for me to stay true to my client's vision for their product. Brett takes an active approach when listening and evaluating clients. When he asks questions, it is not only so that he can relay feedback effectively back to them but also so that he can better understand what they want.

He then looks at a current situation and tries to think of new methods or techniques which will make it easier for everyone to move forward. Sometimes he is able to solve a problem right away; other times there may be something larger that needs attention or additional resources in order to fully execute. Brett has always been able to listen carefully, communicate his thoughts clearly, and find creative solutions while keeping my reputation as well as his top-most priority.

Before diving into solutions, it's important to understand exactly what problem you are trying to solve. Brett first asks clients: What is your business trying to accomplish? Why do you exist? Defining these values allows you to apply a deliberate, rather than impulsive, approach when formulating solutions. He breaks down any task or solution into three parts:

Why does my company need it? How does it affect our culture and business goals? And how might it help advance our mission statement? Once he's identified those questions, he can develop potential outcomes based on whether they fulfill his own personal metric for success

Brett Bartle works hard to understand his clients' goals and then develops a deliberate plan for achieving them. It is important to make sure all details are worked out, regardless of how small they may seem at first, he explains. Problems with one detail can come back and haunt you later on in any project, so it is best to be proactive about avoiding mistakes right from the start.

For Brett, nothing is left to chance. With a deliberate approach towards problem-solving and decision-making, he's committed to finding a precise solution or process that can be replicated over and over again, resulting in consistently great results.

Brett applies these same principles towards his own self-development; he's never been one to coast, always pushing himself and his team forward until we get it right. When Brett says he wants something done right away—and you know it will be handled with precision and care—he means exactly that; from idea creation to implementation, his work follows through every step of the way.
