

Know the Details on Partial Dental Bridges in Little Rock | Knight Dental Care - Little Rock

You do not have to spend another day without one or more of your teeth, not do you have to pull out the remaining ones for restorative treatment.

Little Rock, Arkansas Apr 1, 2022 (Issuewire.com) - Tooth restoration has come a long way. In the past, only dentures were known for replacing missing teeth. Today, though, things have changed. Patients have a variety of options to choose from, meeting both their needs and preferences.

When it comes to using dental bridges to replace missing teeth, there are still different options to pursue there. Have you heard of a partial dental bridge? If not, read on to understand more about them and their uses.

What is a Partial Dental Bridge?

They are tooth replacement appliances that are used to replace a few teeth in the mouth. A [dentist in Little Rock](#) will tell you that partial dental bridges are also known as partial dentures.

Dentures are conventionally known to replace all teeth in the mouth. This is one of the reasons why people still think that they are only fit for replacing teeth for old people. However, in modern dentistry, the versatility of partial dentures allows for a dentist in Little Rock, AR to replace a few teeth, even a single missing tooth. This gives you more options to work with, in tooth replacement procedures.

The Composition of Partial Dentures

They feature artificial replacement teeth that are set to replace the lost ones. Depending on the number of teeth you need to replace, the bridges or partial [dentures in Little Rock](#) will differ in structure.

For single-tooth replacement, the partial dental bridge comprises an artificial replacement tooth and two dental crowns. The dental crowns are used to hold the replacement tooth in place.

On the other hand, multiple missing teeth in a row cannot be replaced by an appliance of such a structure. Instead, a plastic gum-like base holds the artificial teeth in place. Sometimes, a metal framework may be needed to properly hold the denture in place.

How Are The Partial Devices Made?

One underlying factor that must be met in the creation of partial dentures or bridges is precision. A proper fit is necessary for the treatment to be effective. This is why the process of making them takes time. Ideally, a dentist will take impressions of your mouth. This will act as the measurement for making the device.

This whole process takes several dental visits, and a couple of weeks to complete. The dentist also has to allow your gums ample time to heal. This way, any shrinkage realized after healing will be acknowledged in the creation of your denture or bridges. Besides that, the creation process takes time depending on the type of material you want. Patients have varying needs and desires when it comes to the aesthetic appeal of their smiles. You can decide on your preferable type of material to be used for artificial replacement teeth. You can also choose permanent dentures, an alternative to removable dentures. They are also known as implants; our dental clinic provides [dental implants in Little Rock](#) with quality dental care treatment.

Aftercare Tips You Must Know

After your dentures or bridges are installed, you can confidently showcase your new smile. Any adjustments necessary will be made as they come up. However, the big issue comes forth when you start living with your new set of teeth. While they may appear as natural as the other teeth, the feeling may not be the same. That said, there are some things you must know about living with artificial teeth:

- Practice makes perfect – speech and eating may be difficult for you at first. Your gums and jaw still need some time to adjust to the new norm. Therefore, be patient with yourself as you re-learn speech and chewing. However, this shouldn't take too long to master.
- More saliva production – while you learn to live with your new set of teeth, you may experience an increase in the amount of saliva in your mouth. However, this will also subside with time.
- Oral hygiene is crucial – the best way to keep your oral cavity healthy in the long haul. Brushing your teeth and flossing, therefore, should not be things you choose to compromise.
- Soreness and irritation may also be experienced – also the degree of the soreness and irritation differs from one patient to another, it is a common occurrence. Your gums are faced with a new challenge of holding artificial replacement teeth, which takes time to adjust. Therefore, do not freak out if you do such a thing. Still, it should not go on for too long before the discomfort clears out.
