

Free token generator CoinCode offers easy token creation on Ethereum, Binance smart chain, polygon, and more

Token generator web3 app - Create a BEP20 token

Istanbul, Turkey May 20, 2022 ([IssueWire.com](https://www.issuewire.com)) - Crypto tokens are the best digital currencies that cannot be tracked or controlled by a financial institution like a central bank. Businesses can acquire more financial flexibility with their own crypto token. Online crypto token generator CoinCode helps entrepreneurs and business owners to build and deploy their own tokens and dApps on BSC, Solana, Ethereum, and Polygon. They plan to introduce Fantom soon. The users can create their specialized tokens with customized features without a hassle with the help of the platform.

After the token is created, the organizations can list it on any decentralized exchange with the services provided by the free bep20 token generator CoinCode. They can even sell their tokens from the Pre-sale on the website. The [BSC token generator](#) platform uses powerful blockchain technology to develop crypto tokens for all of its clients. Once the coins are deployed the clients will be the sole owner of the coins.

The platform of CoinCode is extremely easy to use. The users just have to come up with a token name to set up supply. The online token generator platform will help you acquire BEP20 or ERC20 tokens. The company not only offers its services during the token creation process but helps its clients with distribution as well. The company is armed with various tools that can help users spread the news about their tokens online. The clients can even customize their tokens and list them on Pancakeswap or Uniswap Exchange easily.

CoinCode is a private decentralized dApp that allows businesses to create and distribute their own crypto token on Binance Smart Chain, Polygon Ethereum, and more with just a click. The highly simplified platform makes crypto token generation accessible for all. To know about their services in detail, visit them at <https://coincode.app>
