

# Septillion announces its First Phase IEO – A great opportunity for investors

Decentralized ecosystem - make an investment

**Cape Coral, Florida May 26, 2022 ([IssueWire.com](https://www.issuewire.com))** - A blockchain company named Septillion has announced the launch of its initial exchange offering (IEO) on a decentralized exchange. The IEO will run from **June 6th**, and investors can purchase tokens using **BNB** and **USDT**. Septillion is a blockchain company that specialises in creating decentralized applications and services.

These services include voting rights, discounts on fees, and the ability to earn profits from fees charged by the exchange. Their goal is to provide users with an easy-to-use platform that makes it easy to invest in cryptocurrency.

This offering will allow investors to gain access to Septillion's portfolio of projects, which includes a decentralized exchange, a peer-to-peer payment system, and a loyalty program while talking with Septillion's CEO, **Mr. Neeraj Kumar**, said, "*This exchange offering is an important step in our mission to provide a safe, secure, and convenient way for people to exchange cryptocurrencies and fiat.*"

Septillion is raising the standard for IEOs with a carefully designed token structure and strict, secure token sale process. Septillion's managing Director, **Sanjay Kumar Prasad**, believes that this offering will help to grow the crypto community and enable more people to participate in the digital economy.

While the **Adil Akhter** Managing Director of Septillion said that "*We will raise \$30 million spanning over four different phases, while its first phase begins with 15% of its fund-raising goal amounting to \$4.5 million as in the seed stage.*"

**Let us throw a light on this futuristic concept of IEO (Initial exchange offering)**

- **What is an IEO?**

IEOs have been gaining a lot of popularity lately as a means of crypto fundraising. *IEOs are conducted on a crypto exchange, and they allow projects to raise funds while giving investors the opportunity to purchase tokens at a discount.* IEOs are attractive to both investors and projects because they provide a high degree of liquidity and transparency. IEOs are also much less risky than ICOs, which often fail to deliver on their promises. IEOs have proven to be an effective way to raise funds and increase exposure for new projects, and they are likely to continue to grow in popularity in the coming years ahead.

- **How About Investors? How Is IEO Beneficial for Them?**

For an investor to participate in the IEO, he should create an account on that given exchange that is hosting the offering, and invest to buy the tokens. Now that you invested, all you have to do is to wait and see what happens to your investment. When the IEO is successful, the value of your purchased tokens will increase, and this is how an investor like you can benefit from an IEO. It's as easy as pie.

- **Why choose the Septillion token?**

Septillion uses the BEP-20 Token with a total supply of 350,000,000 Tokens. The Septillion token can also be found listed on major exchange platforms such as coinmarketcap and coingecko. These listings undoubtedly prove Septillion's credibility.

*The experts in the crypto world are already calling the Septillion token a hot investing opportunity because of Septillion's credible BEP-20 technology which prevents the wastage of energy and computations while ensuring the distributions of proof of stake called (PoS) consensus.*

If you are interested in learning more about our IEO, please visit our website or contact us at <https://septillion.io/>. We look forward to introducing you to this futuristic and innovative way to trade crypto assets.

About Septillion:

Septillion is a part of an international community of the globally

decentralized ecosystem and the first-ever smart contract marketing matrix plan of the BNB blockchain.

This is a self-executing software algorithm that performs the function of distributing partner rewards between community members, subject to certain conditions (Level and matrix marketing plan).

In the end, our aim is to integrate all the companies, employees, and business assets into a unified blockchain ecosystem, which will make conducting a business truly efficient, transparent, and reliable.
