

Jeffrey D. Gross, MD, a Neurosurgeon with SPINE and ReCELLebrate

Get to know Neurosurgeon Dr. Jeffrey D. Gross, who serves patients throughout the States of California and Nevada and beyond.

New York City, New York Jun 9, 2022 ([Issuewire.com](https://www.Issuewire.com)) - A board-certified and fellowship-trained neurosurgeon, Dr. Gross is the Owner of SPINE, and a regenerative medicine practice called ReCELLebrate, is seeing patients in Orange County, California, and in Henderson, Nevada, as well as remotely by computer video conference. In his practice, he offers specialized precision and concierge

treatment options for patients with neck and/or back problems, as well as brain and head injuries. He provides a comprehensive approach to evaluating the pain generators of the spine and associated areas and digs deeper to find the source of the problem when identifying the root issues of persistent pain and injuries. Dr. Gross employs regenerative medicine and other non-surgical options first and foremost. He is an internationally recognized expert in these fields.

As a leader in the fields of neurosurgery and stem cell medicine, he commonly treats other physicians and many patients with severe and complex spinal problems. He continually strives to find non-surgical treatments to conservatively assist with the resolution of the problems he identifies in each of his individual patients. In the event that non-surgical treatments are found to be inadequate, he approaches treatment options from the least invasive surgery first. Because of his methodology, he is frequently sought out to provide second opinions prior to many surgeries. He has authored numerous book chapters, and medical journal articles, and is in the process of completing his first book, “Young Again,” a practical “how-to” take anti-aging action for anyone. Dr. Gross has written and spoken internationally on regenerative medicine for the spine, and anti-aging. He has been awarded top doctor and best neurosurgeon awards.

A 1992 graduate of the George Washington University School of Medicine and Health Sciences, Dr. Gross went on to complete his internship and residency in neurosurgery at the University of California, Irvine in 1997. Finally, he completed his fellowship in spinal biomechanics and chief residency in neurological surgery at the University of New Mexico in 1999. He is a medical philanthropist and a perennial champion of “patient needs over health insurance hassles and denials.”

He has been recognized as a Fellow of the American Academy of Neurological Surgeons (FAANS), the doctor is board-certified in neurosurgery through the American Board of Neurological Surgery (ABNS), and is an active member of the Congress of Neurological Surgeons, and the North American Spine Society.

Neurosurgery is the medical specialty concerned with the prevention, diagnosis, surgical treatment, and rehabilitation of disorders that affect any portion of the nervous system including the brain, spinal cord, peripheral nerves, and extra-cranial cerebrovascular system. Neurosurgeons are doctors who diagnose and treat problems with the nervous system, often by performing surgery on the brain or spine. They treat strokes, tumors, certain types of birth defects, infections, and head or spinal cord injuries. Dr. Gross applies conservative, non-surgical, and regenerative stem cell medicine options to first try to avoid surgery.
