

Robot Barista ELLA - The Future of IoT is Here

Las Vegas, Nevada Jun 7, 2022 (Issuewire.com) - Today the Internet of things promises a new quality of life for all of us, but many different barriers must still be overcome to create it.

Internet of things, also known as IoT, refers to the hardware devices integrated with the Internet for collecting and sharing data. Trigma is now offering IoT services and solutions to businesses that help them run their business effectively and attract audience attention. We cover all areas, including automotive, smart home automation, retail, industries, healthcare, smart energy management, and so on.

Over the past few years, the understanding of [IoT](#) has noticeably expanded and deepened the scale of the upcoming changes that seemed much more modest. IoT is not limited to chatting with the robot on an eCommerce website but is even more advanced. IoT is continuously changing companies in discovering and developing new technologies to support IoT networks. Convergence creates conditions for a recent phenomenon - the Internet of the future, which includes, in addition to the current Internet of People (IoP), also the Internet of media content (Internet of Media, IoM), Internet of Services (IoS), and Internet of Things (Internet of Things, IoT).

Trigma has been offering IoT services and solutions for decades. It keeps innovating its technologies to provide better services to the customers that help businesses reach out to the audience effectively with IoT. We are very excited to share with you that we recently delivered our IoT smart automation tool, i.e., Ella, a robotic barista coffee machine serving contactless gourmet coffee efficiently with the power of AI and robotics.

Ella is one of the world's most successful robot baristas that can work four times faster than humans. Moreover, you can access it via a fully autonomous kiosk. With the help of that, you can place your order and get freshly brewed coffee in just a few minutes.

It featured on CNA, Vulcan Post, [CNBC](#), and other popular media channels. Apart from this, we are working on many other big IoT-based projects and will soon make them live.

You can enter new markets by leveraging existing infrastructure by utilizing the most advanced IoT solutions. At Trigma, they have experts with deep knowledge of the industry who help provide IoT solutions with the best technology and solutions. It allows entrepreneurs and retailers to improve customer experience, maximize customer loyalty, create opportunities for higher conversion rates, and minimize the risk of losing business.

Let us know if you have any queries or searching best IoT solutions for your business, then reach out to the Trigma experts. And if you want more details, visit the website: <https://trigma.com/iot/>
