Upcoming Batch Announcement 18th-19th June 2022

LearNow offers the Leading SAFe® Certification online training for Agile professionals to grow in their agile careers.

Bengaluru, Karnataka Jun 7, 2022 (Issuewire.com**)** - **Bengaluru, Karnataka: –** As agile transformation gains prominence in organizations, it is important to have a certified SAFe® expert on your team. To help you get ahead in the race of agile transformations, LearNow is offering online SAFe® Agilist certification training and it presents an excellent opportunity to upskill yourself in this critical area. The next batch of this course will be held on June 18-19. It is open for any agile professional wishing to upskill themselves with the latest in Agile methodologies.

Organizations around the world are struggling to find ways to manage their business in a chaotic environment where new products or services need to be developed and brought to market rapidly. Large enterprises, small businesses, and non-profit organizations alike are looking for a framework that will help manage their business effectively. They are looking for a proven methodology that will allow them to innovate in the face of disruption. They are moving towards Scaled Agile Framework (SAFe®).

Scaled Agile Framework (SAFe®) was introduced in 2011 by Scaled Agile, Inc. SAFe is a set of principles and patterns that bring agility into complex problem domains. SAFe provides a shift in how work gets done inside organizations. It creates a culture where multi-disciplinary teams align together in achieving a common shared goal.

The SAFe framework creator, Scaled Agile Inc.'s latest report reveals the significance of SAFe for any

agile organization. 1M+ professionals are SAFe certified, and 20K+ organizations implemented this leading framework. Fortune 500 companies are employing SAFe certified experts. Some companies like Cisco, Johnson control, and Cerno are already benefitted from SAFe implementation in terms of productivity, employee engagement, and more.

Leading SAFe Certification – Foundational Course

We believe that one of the keys to leading a successful company is having a workforce that's engaged, productive, and passionate about what they're doing. The Leading SAFe certification course helps you develop your leadership skills with a focus on building an agile environment, nurturing your talented workforce, and elevating your employees to be phenomenal.

This certification course is a must-have for any Agile Practitioner who wants to grow their career and become a leader in the agile transformation. It not only helps you understand the concepts of Agile Transformation but also provides you with practical hands-on experience that you can implement in your work.

SAFe Agilists are certified professionals who have the ability to lead SAFe initiatives and guide enterprises in the right direction. They are recognized as experts in Agile practices such as Scaling Agile and SAFe implementation. The main benefits of getting employees to be SAFe certified are increased agility, increased efficiency, and improved project delivery

Features Of SAFe Agilist Course

SAFe is a global, systematic approach to enterprise software development. SAFe's goal is to improve the effectiveness of software delivery and reduce the time to market. LearNow SAFe Agilist course is designed to put the skills into practice in an immersive environment so that you can experience first-hand the dynamics of SAFe skills development for yourself.

- Comprehensive & collaborative program
- Live instructor-led online training
- Flexible schedule and learn at your own pace
- Preparation for the certification exam
- 1-year membership with an honorable digital badge
- Get access to resources available in the SAFe community

Benefits Of The Certification Course

Employee Benefits

SAFe is one of the most preferred frameworks around the globe. With an increasing number of companies adopting SAFe worldwide, there is also a dramatic increase in demand for SAFe certified employees. As a result, a SAFe® Agilist certification has a substantial contribution to the career prospects of employees. The following is the list of benefits:

- It is a universally recognized certification. Once you earn the certification, you become eligible to transcend geographical barriers and work anywhere around the globe.

- A [Leading SAFe Certification](#) would ensure a significant hike in your remuneration. This is a predominant reason why most professionals consider obtaining this credential. As per statistics,

employees having this certification earn 25% more than those who don't.

- A **SAFe Agilist Certification** provides the necessary knowledge to employees in overcoming challenges faced in an organization during scaling agile. A certified SAFe Agilist possesses the management skills required to guide and encourage team members to implement lean-agile practices.

- It adds value to the profile of an employee. Recruiters around the world are actively hiring SAFe certified employees. This credential is proof of your knowledge that would differentiate you from other professionals who claim to be agile. This certification helps you to earn credibility, respect, and recognition, so definitely it's a worthwhile addition to your career.

- Employees will be able to gain access to several materials and training sessions that would help them in refreshing their SAFe knowledge. And staying updated contributes to the profit of your organization, making you indispensable in your company

- The SAFe community network provides access to authorized individuals where they can upskill themselves on SAFe agile best practices. You may learn more about it by visiting this community.

Organization Benefits

Organizations that started implementing the SAFe framework witnessed a plethora of benefits. It helps in improving technology, workflow, and management and also enables better synchronization among team members. It also promotes transparency, improves product quality, and many more. The following are the benefits enjoyed by the organization post-implementation of SAFe:

- **Faster-Time-To-Market:** SAFe ensures improved time-to-market. This is possible because it aligns several cross-functional agile teams to work on a single project which results in finishing the task within specified timeboxes, due to which customers' demands are met on time. SAFe helps in swift decision-making, effective communication, facilitating the functioning process, and remains customer-centric.

- **Better Quality:** Being one of the core SAFe values it proves the benefit of updating quality in each iteration. A SAFe framework is unique because it promotes the fact that quality is everyone's responsibility rather than a last-minute focus.

- **Rise in Productivity:** SAFe ensures a substantial rise in productivity by showing the way of removing useless tasks and impediments to highly skilled agile teams and ARTs. It also enables teams to function in a lean-agile way, thus ensuring continual improvements and customer-centric products.

- **Better Employee Engagement:** Improved working style makes an employee satisfied, more involved, and productive. SAFe enables the whole team of talented developers to work independently for a shared purpose. The unique feature of this framework is that it makes everyone accountable for the success of the organization. And these factors altogether unlock the intrinsic motivation of those knowledge workers. SAFe organizations have the required resources to reduce burnout and ensure the happiness of employees. And needless to say, happier employees are the most productive ones.

Thus it can be concluded that this certification course is not only beneficial for the employees but also for the entire organization. According to **payscale,** the average base salary of a Certified SAFe Agilist is ₹2 Million per year.

Professionals who aspire to support their organization with their own skillsets during the implementation of a lean-agile framework like SAFe are the best-suited ones for this certification course. However, some specific designations are as follows:

- CEO
- Scrum Master
- Product Owner
- Program/Project/Product Manager
- Portfolio Manager
- Consultant
- Solution/System Architect
- Change Agent
- Product Manager
- Team Lead
- Business Analyst
- Agile Coach
- CIO
- Release Train Engineer

There's no specific requirement for this two-day certification training course. Nevertheless, the following skills can be a plus for a better understanding of the subject:

- Five years+ experience as a Business Analyst, Software Developer, Product or Project Manager, or tester.
- A good grasp and expertise in Scrum

Once you are enrolled in this two-day online certification training course, the next step is to gain an in-depth understanding of the courses and study materials. LearNow's experienced and highly-skilled trainer would guide you throughout the process.

Now to become eligible for acquiring this certification participants have to take and qualify in the exam conducted online. Its duration is of 90 minutes and comprises 45 multiple choice questions out of which 35 should be answered correctly to pass the exam. This means a minimum of 77% is required to successfully accomplish the test and to obtain a SAFe Agilist Certification, issued by Scaled Agile, Inc.
