# Kshitij Tyagi maintaining a steady shine in the tech community

Kshitij Tyagi (Founder & Developer - ScribbleX) probably doesn't know how to give up.

Middletown, New York Aug 4, 2022 (Issuewire.com**)** - Despite many problems, Kshitij Tyagi doesn't seem any less motivated and dedicated. On 20th July 2022, ScribbleX was down all over the world. Sources revealed the data, and the source code got corrupted due to some technical glitch.

On 29th July 2022, ScribbleX was found live again with a better layout, more functionalities, and a higher response time. Nobody saw this coming in the Open-Source community.

Kshitij Tyagi doesn't seem to know the meaning of giving up.

In an email conversation with Kshitij, he said "Things slipped out of hands completely. I did think that it was all gone, but then I just grabbed a cup of coffee and got back to developing the platform from scratch."

ScribbleX claimed to be the most advanced online website/web-app development environment.

ScribbleX is an online development environment for websites and web applications. It is currently under development but does work perfectly as a code-based development environment.

Kshitij Tyagi (Kshitij S. Tyagi) is the Founder and Developer of ScribbleX.

More about Kshitij Tyagi

Kshitij Tyagi (Kshitij S. Tyagi) was born on the 23rd of March, 2000. He completed his High School at Birla School, Kalyan and his Secondary High School at Ryan International School, Noida. In the year 2018, he went for his higher studies (B.Tech) to Bharti Vidyapeeth, Pune for B.Tech in Computer Science Engineering, but left it after 3 months of being there.

"I found a rat race on-going in college same as in the schools. I never wanted to be a part of a race where we memorise things instead of learning and gaining knowledge. I don't support the education system that we follow, it is more focused on how well a student can memorise than how well a student learns. I left my college because I realised that I cannot adjust to the environment where I have to memorise something which I won't even be using in my life." Kshitij said.

In 2018, after leaving his college he returned back to his home in Noida and started learning things he believes the matter in the real world.

"I started building projects, learning new programming languages, improving my skills, and building projects because at the end of the day, the world requires knowledge." - Kshitij.

In the year 2021, he started building ScribbleX. An online web development environment for programmers where they can build websites, pages and web apps in a way more efficient way than any other existing online platform.
