

Projector, A Rising Trend of Home Theater

Bedford, New York Aug 29, 2022 (Issuewire.com) - Nowadays, more and more projector brands have published their new products, but it is difficult for some beginners to pick a projector.

Generally, you can check the [projector buying guide](#) to know more about common projector parameters. The first factor you should consider is the usage scenarios. For example, the [best golf simulator projector](#) can satisfy the needs of golf fans. The [best budget 1080p projector](#) is suitable for camping lovers. The best 4K projector is suitable for movie fanciers.

If you pursue high resolution and sharp images, you can pick a 4K projector directly. For example, the hot Dangbei Mars Pro 4K laser projector. It can project crisp images of 300 inches and brings an immersive viewing experience.

Compared with traditional lamp-based projector, laser projector has longer lamp life and much more bright colors. Generally, a laser projector has a long lamp life of 30,000 hours, which is longer than a lamp-based projector's 5,000-6,000 hours.

More importantly, the Dangbei Mars Pro has a built-in Android system, meaning you do not need to connect the projector to a TV stick or other streaming devices. If the projector has no system, then you can just connect it to a TV stick or game console to access more content.

In addition, wired and wireless connectivity are also critical. To ensure convenient and quick connection, the projector should be equipped with versatile interfaces, such as HDMI and USB, and good wireless connectivity, such as Bluetooth and Wi-Fi. The HDMI interface is used to connect the projector to external devices, such as TV sticks, game consoles, or computers. If the projector has Wi-Fi, then you can connect the projector to the network wireless. If it has Bluetooth, then you can connect the projector to a Bluetooth speaker conveniently.

Last but most importantly, the projector should have high brightness so that you can use the projector during the daytime. The projector should have at least 2,000 ANSI lumens to deliver bright images during the day. Dangbei Mars Pro has 3,200 ANSI lumens and you can enjoy a giant screen under ambient light.

Of course, there are also many factors you should consider before buying a projector, including contrast, color gamut, display technology, system, etc.
