

RAS Infotech presents new CNAPP vendor at GITEX

Dubai, United Arab Emirates Oct 8, 2022 ([IssueWire.com](https://www.IssueWire.com)) - RAS Infotech presents a new CNAPP vendor at GITEX

RAS Infotech Limited, the distributor of world-class information security management products and services, is happy to announce its partnership with Runecast Solutions Ltd, a Gartner Cool Vendor and provider of an AI-driven platform that helps DevOps and SecOps team secure their workloads across hybrid environments.

“Our partnership with Runecast enables us to offer a simplified, intelligent platform that provides real-time automated and actionable insights for vulnerability, configuration, and compliance management for on-premises, hybrid, and multi-cloud IT environments which many clients have been looking for in order to comply with regional cyber security frameworks like SAMA, NESAC, ADHICS, PCI, etc. We are confident that we will be able to continue the same success as we have received with our other technologies in the middle east with Runecast”, said Khazi Mohamed Akram, CEO of RAS Infotech Limited.

Both organizations will join GITEX Global in Dubai this October 10-14, to present the latest trends in mastering cloud security and IT operations.

New trend: adoption of CNAPP for securing the cloud

As RAS Infotech continuously aims toward total customer satisfaction, the emerging trend of Cloud Native Application Protection Platforms (CNAPP) did not go unnoticed.

Organizations in need of complete visibility of their complex hybrid or multi-cloud environments need the ability to consolidate various tool sets where possible, and a solution that requires no learning curve (due to prevalent staffing shortages), to help ensure security compliance across the estate.

CNAPP, a term coined by Gartner, combines the categories Cloud Security Posture Management (CSPM) and Cloud Workload Protection Platform (CWPP) to provide both the proactive monitoring element of CSPM and the protection aspect of CWPP.

“As the majority of our clients have moved to cloud infrastructure, managing SAAS platform security posture and complying their datacenter to minimum baseline can be achieved with Runecast and our customers can stay ahead of threats to future-proof their businesses,” said Khazi Akram from RAS Infotech.

Runecast Head of Product Management Markus Strauss stated, “It is important for organizations to choose a platform that meets specific needs, which in terms of multi and hybrid cloud environments typically means coverage of multiple vendors and locations visible through a single vendor or a single-platform view.” This holistic view enables organizations to effectively secure and protect cloud-native applications and remove silos between the large number of tools that an organization might be used to cover all aspects of its infrastructure.

On CNAPP adoption, Mr. Strauss added, “CNAPP adoption is largely driven by DevOps and DevSecOps teams looking for ways to secure their cloud workloads natively in the cloud, while IT Procurement teams are using it as a catalyst for consolidating spend and opting for the ease of single-

vendor purchasing.”

No surprise: RAS Infotech adds Runecast (a leading CNAPP vendor) to its portfolio

Runecast provides organizations with a proactive approach to security compliance, business continuity, and operational resilience – whether on-premises, hybrid, multi-cloud, containers, or OS – with automated compliance auditing, best practice checks, configuration drift management, vulnerability assessment/management, remediation and reporting for multiple technologies.

Runecast has ranked as a ‘High Performer’ in the Spring, Summer, and Fall 2022 G2 Grid® Reports for the categories Security Risk Analysis, Cloud Workload Protection Platforms (CWPP), Vulnerability Scanner, Cloud Compliance, and Cloud Security.

"IT teams are aiming to consolidate into a single platform that evolves along with their needs," said Mr. Strauss. "To provide the means of future-proofing their environments, Runecast integrates cross-technology insights – for AWS, Azure, GCP, Kubernetes, VMware, Windows, and Linux – into a single platform."

Runecast [recently announced additional gains](#) made in the Cloud Native Application Protection Platform (CNAPP) and IT Operations Management (ITOM) spaces and will present the latest features at [GITEX Global](#). During the week of 10-14 October 2022, you can meet RAS Infotech and Runecast in Dubai at the world’s largest, most inclusive tech and startup event. The team is looking forward to meeting you in person at **Hall: Sheikh Rashid and stand No SR-F5**
