

Reliable One Resources / Quantum Filtration Ramping Up to Meet Demand

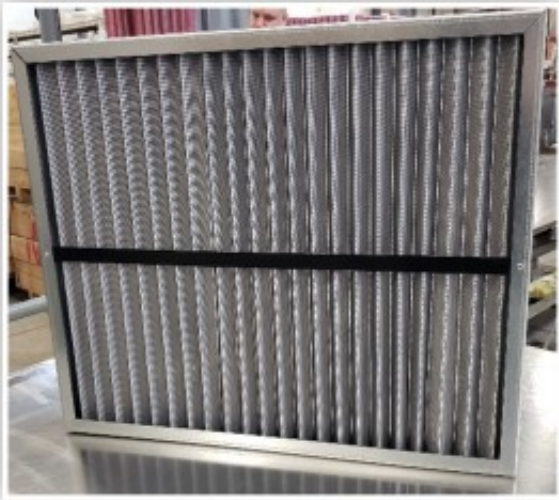

Disruptive Technology Air Filtration HEPA & MERV Filters

West Palm Beach, Florida Nov 19, 2022 (Issuewire.com) - www.QuantumFiltration.com

It looks like one or two of the hopeful income streams regarding Reliable One Resources & Quantum Filtration may be in for a payout early in 2023. The company has been working with disruptive technology for the past several years now, specifically in water cleanup at the Natural gas & Crude oil platforms. Since Covid 19 they have been diligently working simultaneously using their technology in the air filtration industry. They created the 1st N99 mask for use in the medical industry and at the forefront are Commercial and Residential air filters. The CDC has demanded a much more aggressive air filter than the MERV 8A. Reliable One Resources hopes to deliver a filter that is rated a MERV 16 (hospital grade air) as well, a HEPA filter that's only one inch thick vs competitors at 12 inches. The companies' filters will sell at a deep discount to any competition

This could very well become a golden goose for the company and its investors.
