

HomeGrid Stack'd Series receives UL9540:2020 certification

Henderson, Nevada Dec 29, 2022 ([Issuewire.com](https://www.issuewire.com)) - Lithion Battery is pleased to announce that their HomeGrid Stack'd Series has received UL 9540:2020. UL 9540: 2020 is one of the highest safety certifications for lithium-ion batteries in energy storage applications and is a requirement in many markets around the US and in Canada. HomeGrid's high-quality lithium iron phosphate batteries, with a market-leading 24kW surge, are the first to certify with Sol-Ark's new 15k inverter making it an ideal solution for whole or partial home backup.

Attaining this certification means that the Stack'd Series battery has now met all certifications for installations in North America. Lithion's HomeGrid batteries can power everything from small residential sites to small commercial and can use any power source to charge the system. HomeGrid products offer a high-capacity, customizable power solution catered to customers through a stackable design.
